

Positioned at a confluence, the new light tower is formed by the unification of smaller pitch roofs structure at one nodes of the park. Underneath the roof, communities are brought together through its programs. On Top, a 360 degree views of the park and the city is there to be enjoyed. Upon entering the elevator, visitors will be able to learn more about the local environment. It will signify the importance of human connection to the environment, that in order to enjoy the spectacles on Top, we really need to take care of the earth Underneath.
