

The project is an architectural icon for Silicon Valley, known as the center of innovation in the world.

As well as the project site, Arena Green Park, which is a habitat for plants, aquatic animals and birds.

The similarity of the growth, reproduction, and regeneration of data to living organisms and organisms has led the design to take advantage of reproductive forms such as pyramids.

The expansion or disintegration of these hollow pyramids is very diverse.

And all the members of the shrines are wooden.

It is very effective in reducing air pollution and is also a renewable material.

However, with solar panels and vertical wind turbines due to the storage of solar and wind energy to reduce fossil energy to zero.
