

SiliconSpan is an iconic architectural landmark that activates Arena Green and the Guadalupe River Park with an infinity-shaped aerial bridge spanning Confluence Point. The structure is composed of two spans that form a gently rolling walkway loop 150' above the ground. The upper span has a retractable section at its apex that when open breaks the continuity of the walkway. This creates the world's longest cantilever at 300'! The separation in the span and infinity shape of the building represents connectivity, the electronic circuit at the heart of tech and the idea that innovation is never finished.
