

Continuum

Project Summary

Silicon Valley reinvents matter. Inspired by history, digital technology has transformed our collective vocabulary. The oldest things in the world—cloud, tablet, scroll, screen—become new again.

Continuum reveals and celebrates this culture. The core design element—a monumental, interactive ribbon—dematerializes from beginning to end, illustrating humanity’s evolution from analog to digital technology. The design highlights Silicon Valley within the larger history of human communication, and the potential of future innovations.

This horizontal monument anticipates a more democratic future. American monuments are often vertical, architectural statements. Continuum embraces the horizontal landscape, creating a new ground plane for public engagement.
