

Global Ripple is a dynamic high-tech monument designed to pay homage to the dynamic nature of Silicon Valley. Designed like a pebble (SJ) dropped in a pool of water (World) and causes Ripples to reach all the corners of the earth. The building incorporates countless local technologies invented and developed which profoundly changed the world: Microchips, Computers, Lasers, LEDs, Fiber Optics, Networking Equipment, Solar Panels, Storage Batteries, Software, Social Networking plus others

The building materials are primarily recycled glass wall blocks and solar panel roof structure to pay homage to our environmental awareness. Global Ripple is not only carbon free, it is carbon negative building creating power beyond what it requires.

The monument grounds include a living garden and orchard to pay respect for our agricultural roots. This garden incorporates composting so that the plant nutrients are generated from waste. In keeping with what you expect, it also incorporates Growzebo, a SJ designed automated indoor vertical farm to showcase the future of urban agriculture
