

PROJECT SUMMARY:

As the nexus hub of transportation in the center of San Jose will serve to culminate a three-mile kinetic nature walk at the confluence of the Guadalupe River and Los Gatos Creek, this proposed structure offers several unique features, among them are:

- * Observation Park preserve hoisted fifty feet in the air
- * Pathways for continuous exercise
- * Contemplative view stations
- * Serene and comforting privacy space in public areas offering socially responsible social distancing and communing. This space will also create a uniquely exhilarating and active exterior space.
- * The four structural, two hundred foot tall pylons are visible across town day or night which, uniquely are the only earth bound connection points!

We suggest burrowing into Mother Earth with an amphitheater to bring street theatre back to the community as an expression of the arts. Social activities and educational events may be programmed into this space.

Finally, it must be noted that San Jose will be leading the way as an innovative city consistent with the state of California's standard of excellence building this regenerative landmark.
