A single tree is an impressive sight, but a collection of trees creates a forest ecosystem that incubates, creates, and inspires. A city as dynamic and unique as San Jose deserves more than a singular, conventional icon. Rather a symbol that represents the importance of innovation and strength in numbers.

The **Digital Forest** is an approach that integrates technology, nature, and ideals of San Jose. The design consists of digital columns with interconnected elevated plazas. The Digital Forest serves a variety of functions with integrated screens and audio that create flexible technology for virtual calls, remote working and cultivating innovation.
