

In our design, we radically rethink the three primary elements of the site and its surrounding.

We suggest to:

- Replace the existing parks on both sides of the River with a dense and multilayered urban Jungle of local trees.
- In place of the two regular existing parks, our design *fuses* the *park* and the *monument* into one singular phenomenon connecting the urban forests.
- on the narrow urban margin, we suggest multiple miniature urban spaces as opposed to existing spaces and tennis courts.

Thus, the idea is to create a synergic complex, juxtaposing the monument-park, urban forests and the miniature spaces.
