

The whole building connects the two sides of the base like a bridge arch. The smooth curved shape represents the foremost technology of Silicon Valley. The green roof design not only presents the nature-loving lifestyles of people living here, it also reduces carbon emissions and saves water resources.

The complex is designed for entertainment, exhibitions, dining and shopping. The curved surface of the envelope can be back-lit with LED. It can showcase exhibitions about science or nature. It can also display any interactive or immersive art in full 3D fidelity. The dining section provides both fine-dining and fast casual meals for employees working downtown San Jose including the Google Future Park.

In order to protect the ecological environment and wild animals, the part across the Guadalupe River will remain dark at night.

It is a great venue for holiday celebrations or any large social events. The curved LED screen can display the related digital content. At the same time, the trees on the base were moved to the roof to keep the base open, providing a gathering place for the crowd. Whether you live here or visit, be ready to immerse yourself in technology, nature or even a virtual digital space. It is an ideal venue for exhibition, social events or just a casual walk.
