

The main concept emerges from the simulation of the important features of the natural environment crossed by the historical U.S. Route 66, a global touristic destination in the 1930s. This route is chosen because it connects the eastern and western areas of The U.S. This linkage is consistent with the spatial composition of the project site. 7 triangles with different scales form the landmark. The number 7 symbolizes the number of metalloids, the main supporter of technological development in The Silicon Valley and the world. Also, the triangular shape symbolizes the San Jose historical lighting tower in an abstract way.
