

Project Summary

MazZone Garden is a living sculptural installation and a garden labyrinth merged with an Augmented Reality gaming experience. The concept is designed with an environmentally friendly approach paired with interactivity and a powerful social statement. Through repurposing the wire netting -- usually used for building fences and defining borders -- for creating a place of shared experience and attraction of various social groups, we draw attention to the issues of justice and global solidarity. The sculptural installation and maze constructions will be accompanied with climbing plants growing on the netting and creating the natural framing of the human-made environment.
