

Alternative Futures

San Jose has been known as the hub for future technologies since the inception of many major companies and the many other start ups that have paved the future for the world today as we see it. The Nature of the people is young and eclectic and exciting the future is unknown.

This is cheers to a future - to many futures unknown unseen unforetold - here is to the future of San Jose

The infinity symbol serves as a design basis here where it represents the future of the city, the symbol is displayed at different angles and in different ways . Different futures in different views. Different futures for different people. The design is culturally significant in that it represents the flow of water in a fluid way. The symbol is a powerful one that can be seen and experiences from different views in the town.

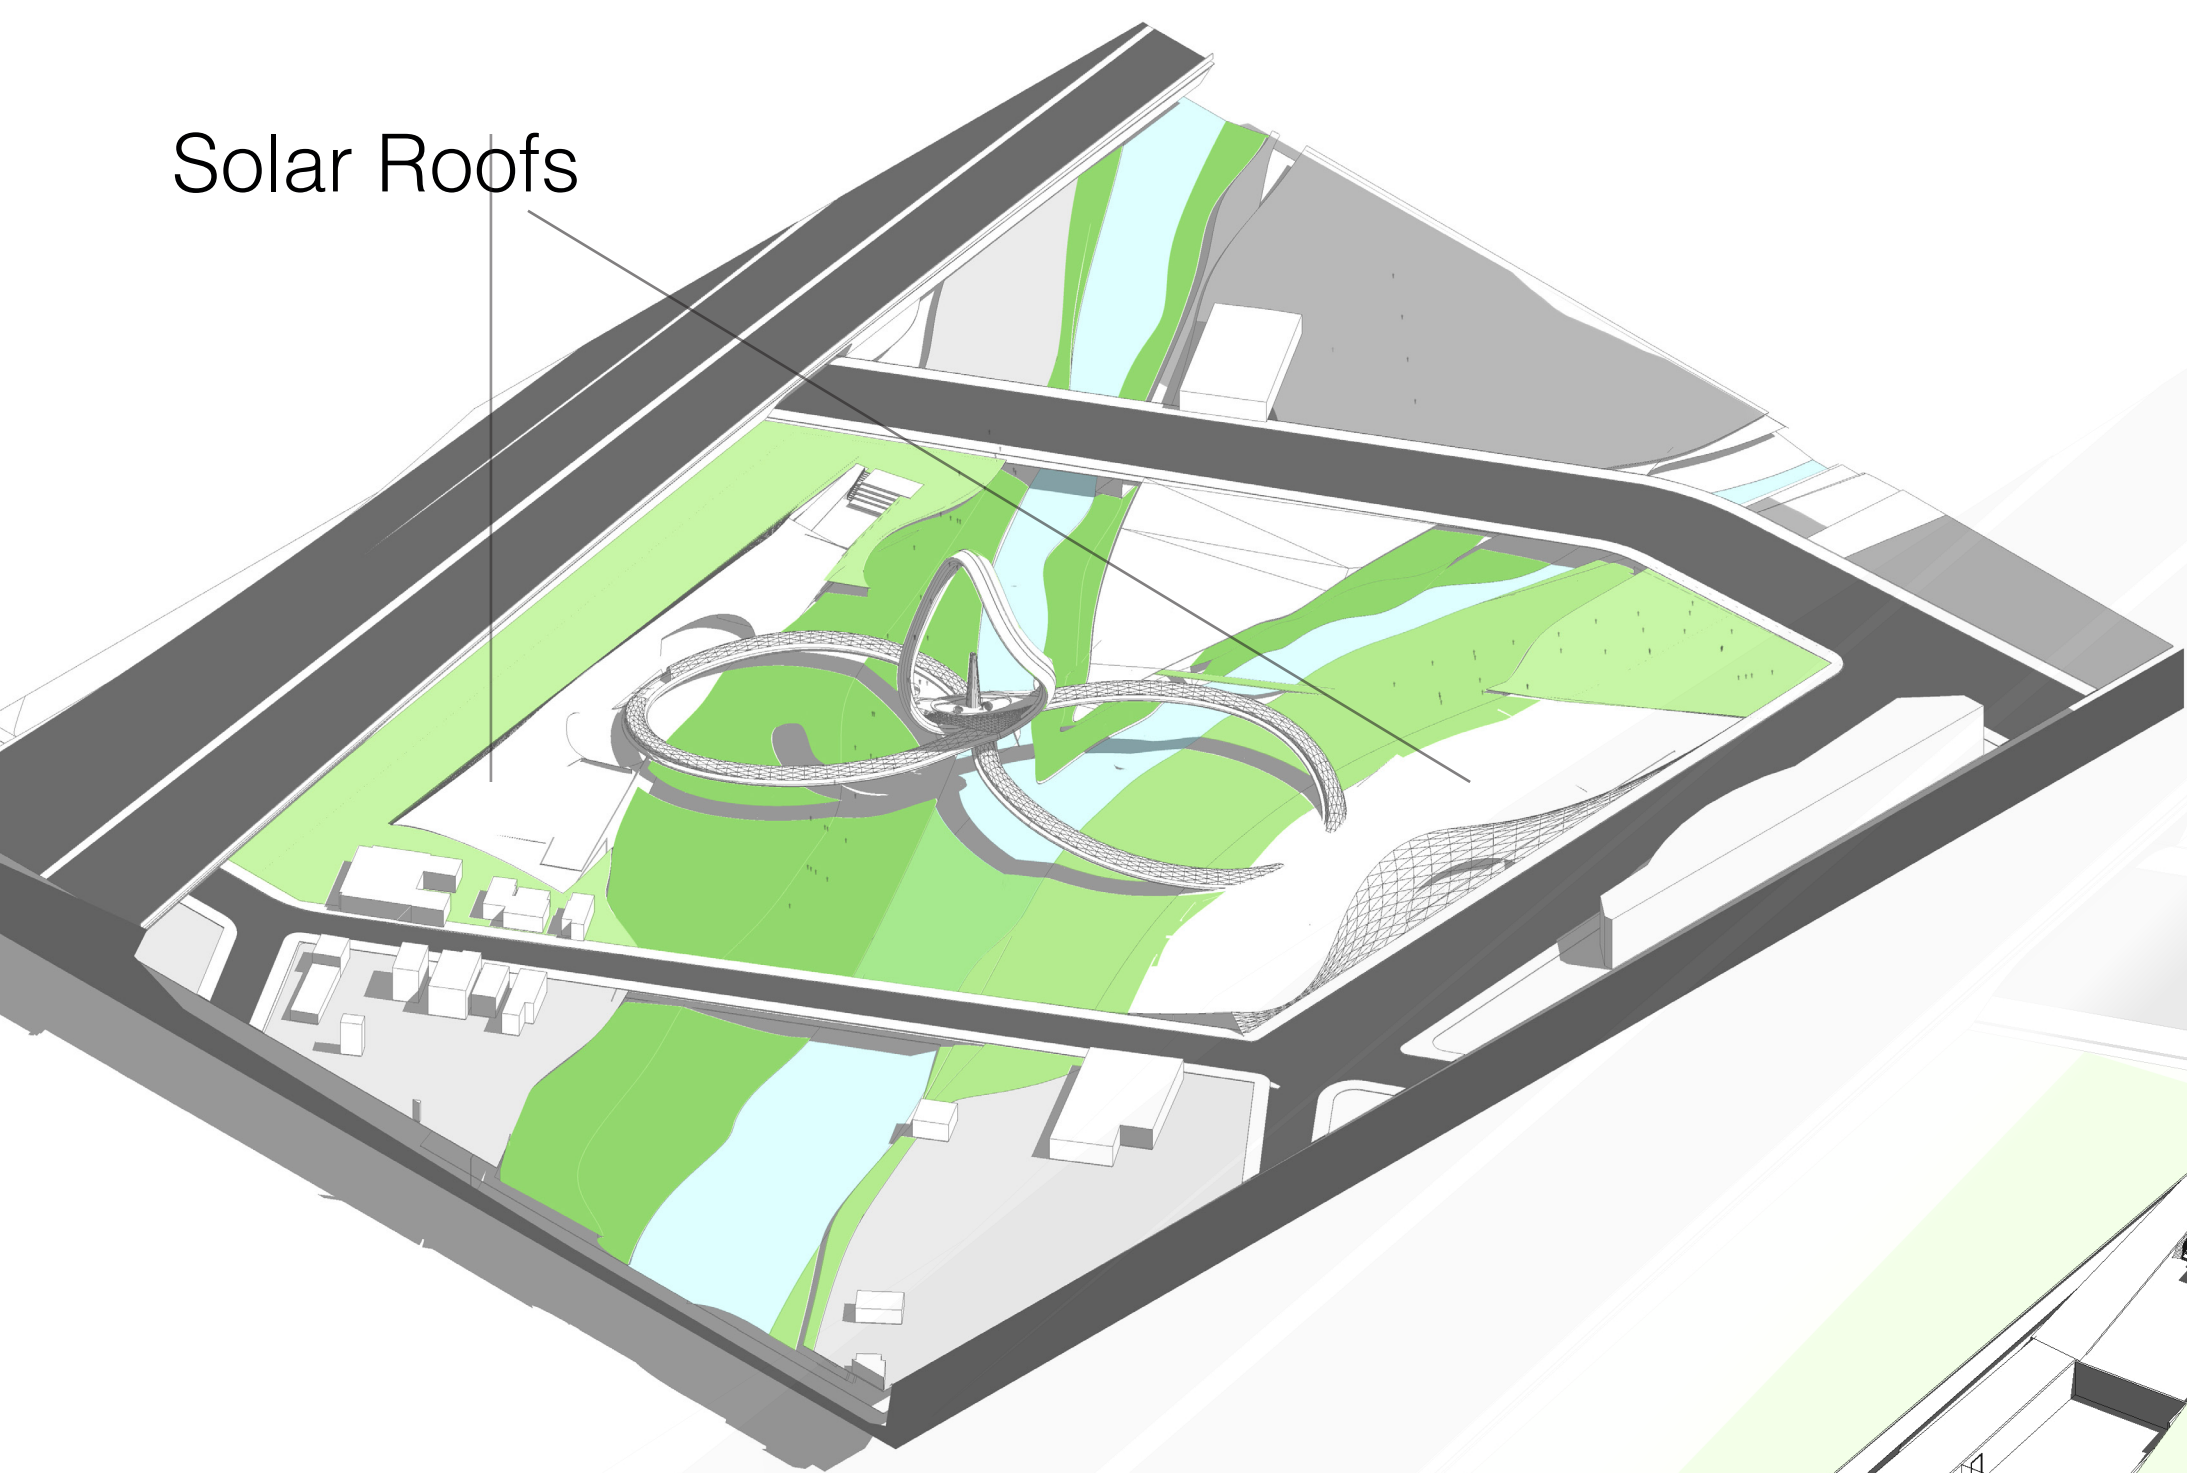

One of the basis was that due to height limit the tall monument was rather bent over. The design has an element that can be configured to different colours and different views as needed. As well as projections and lights shows.

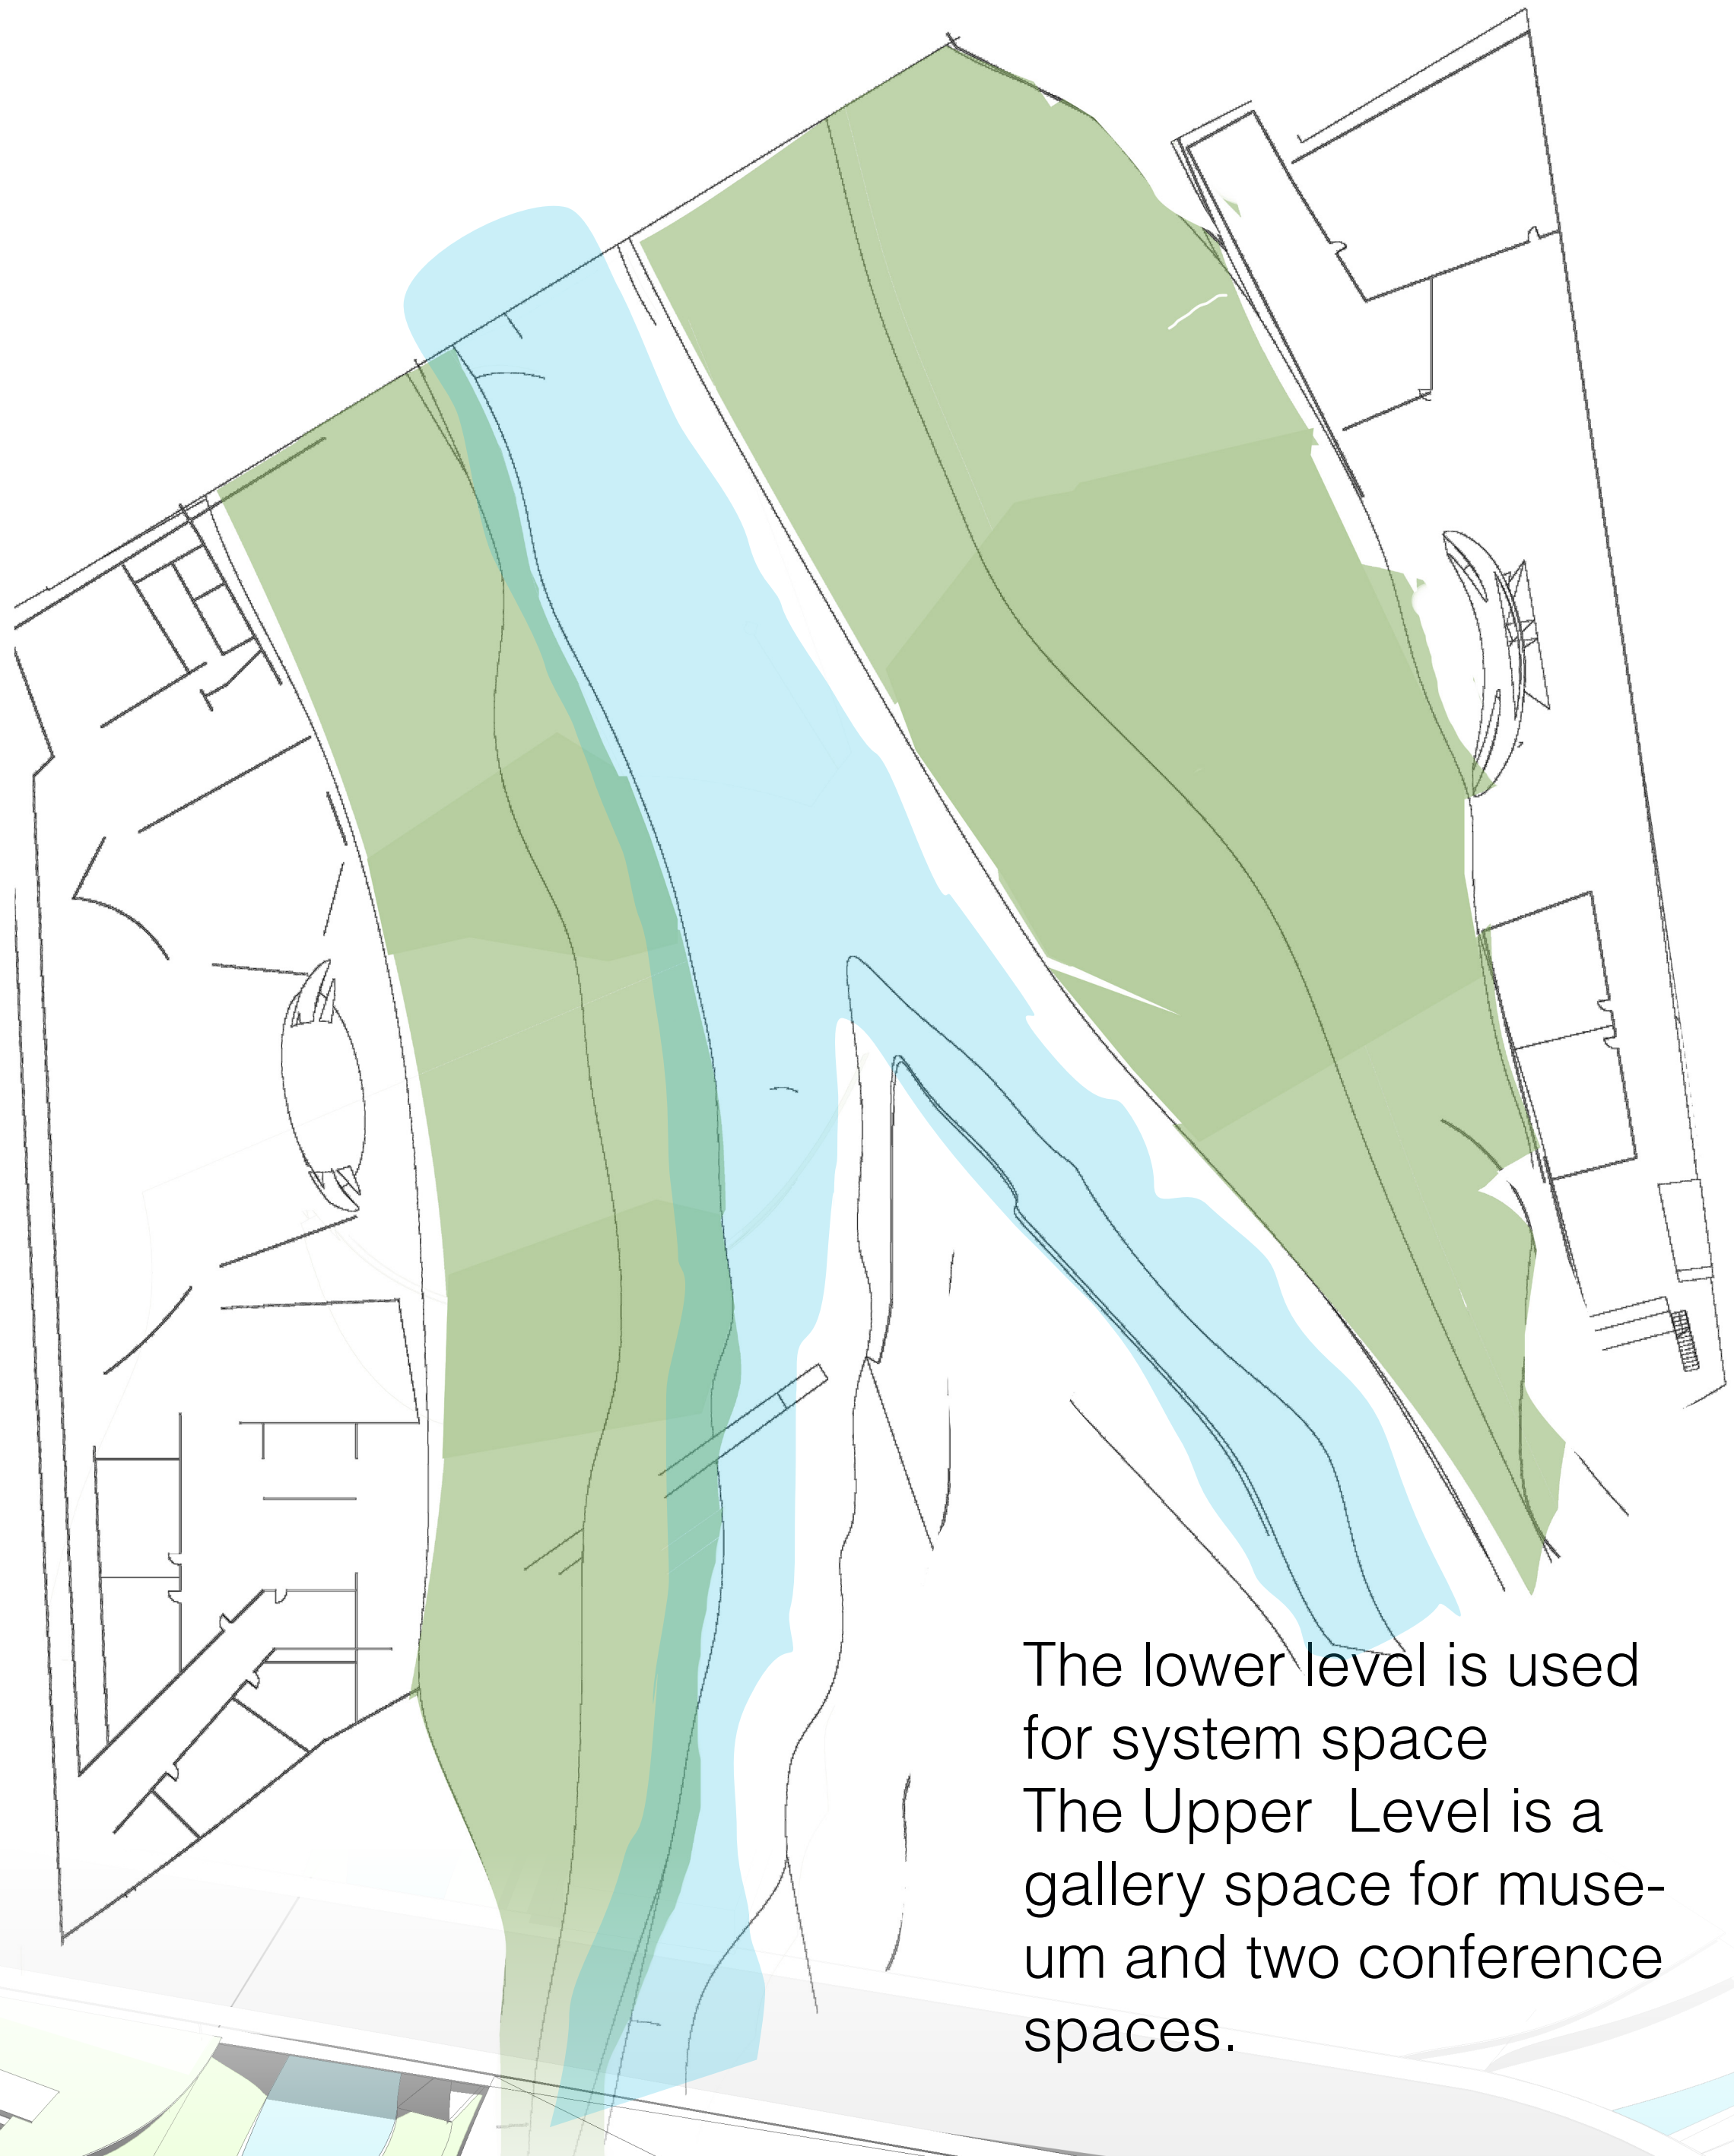

Main level

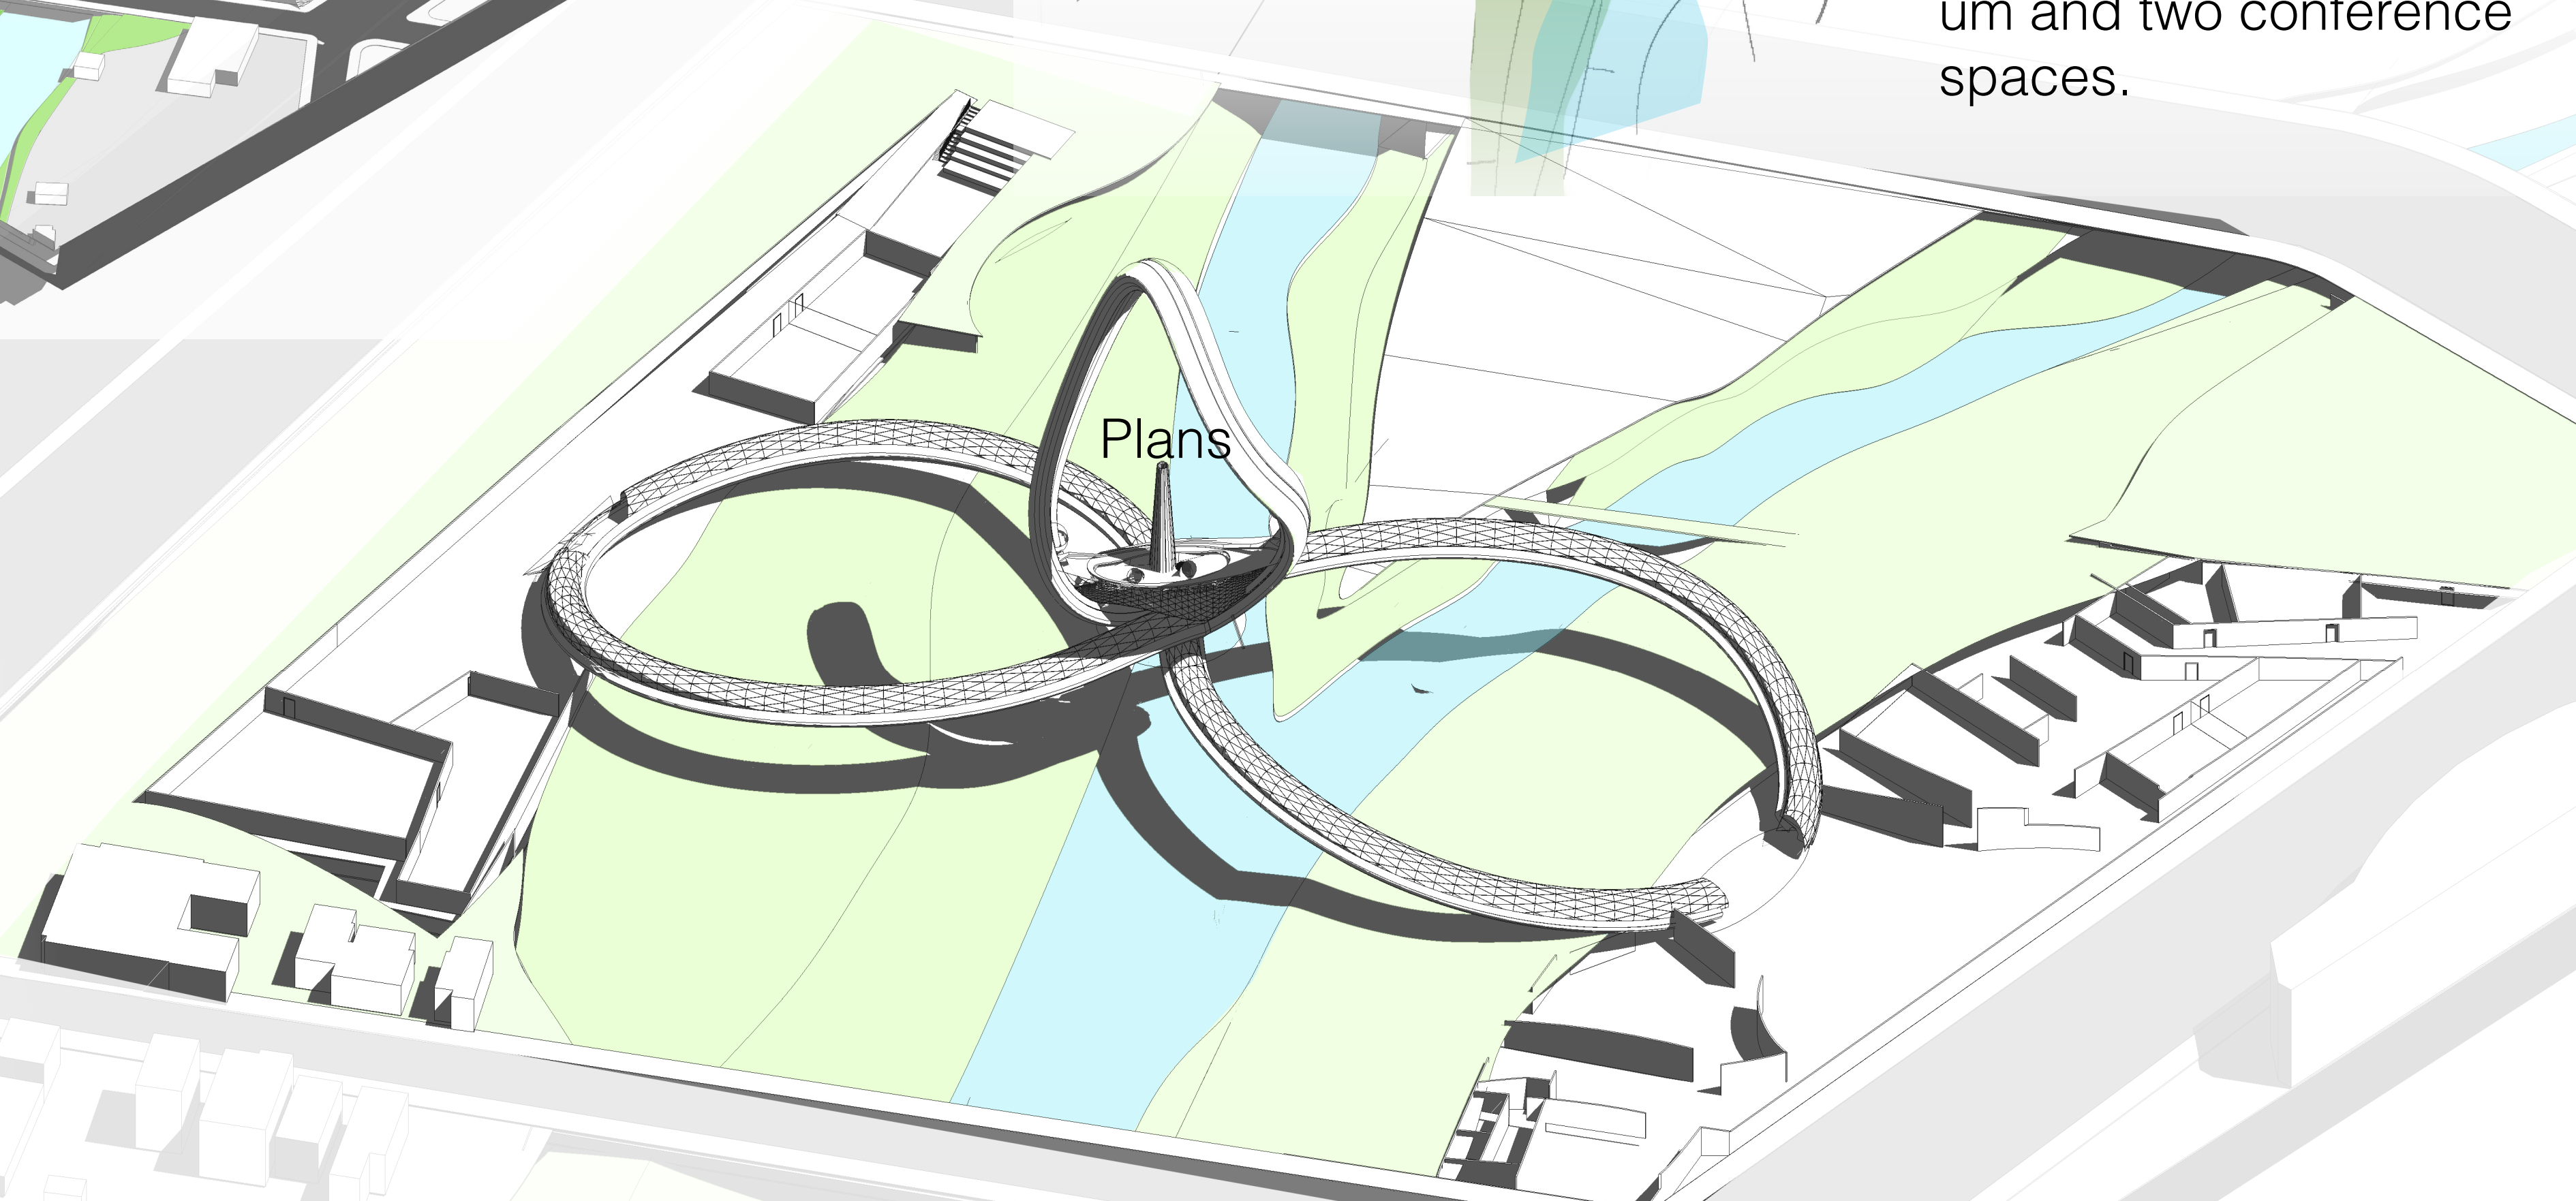

Secondary Level

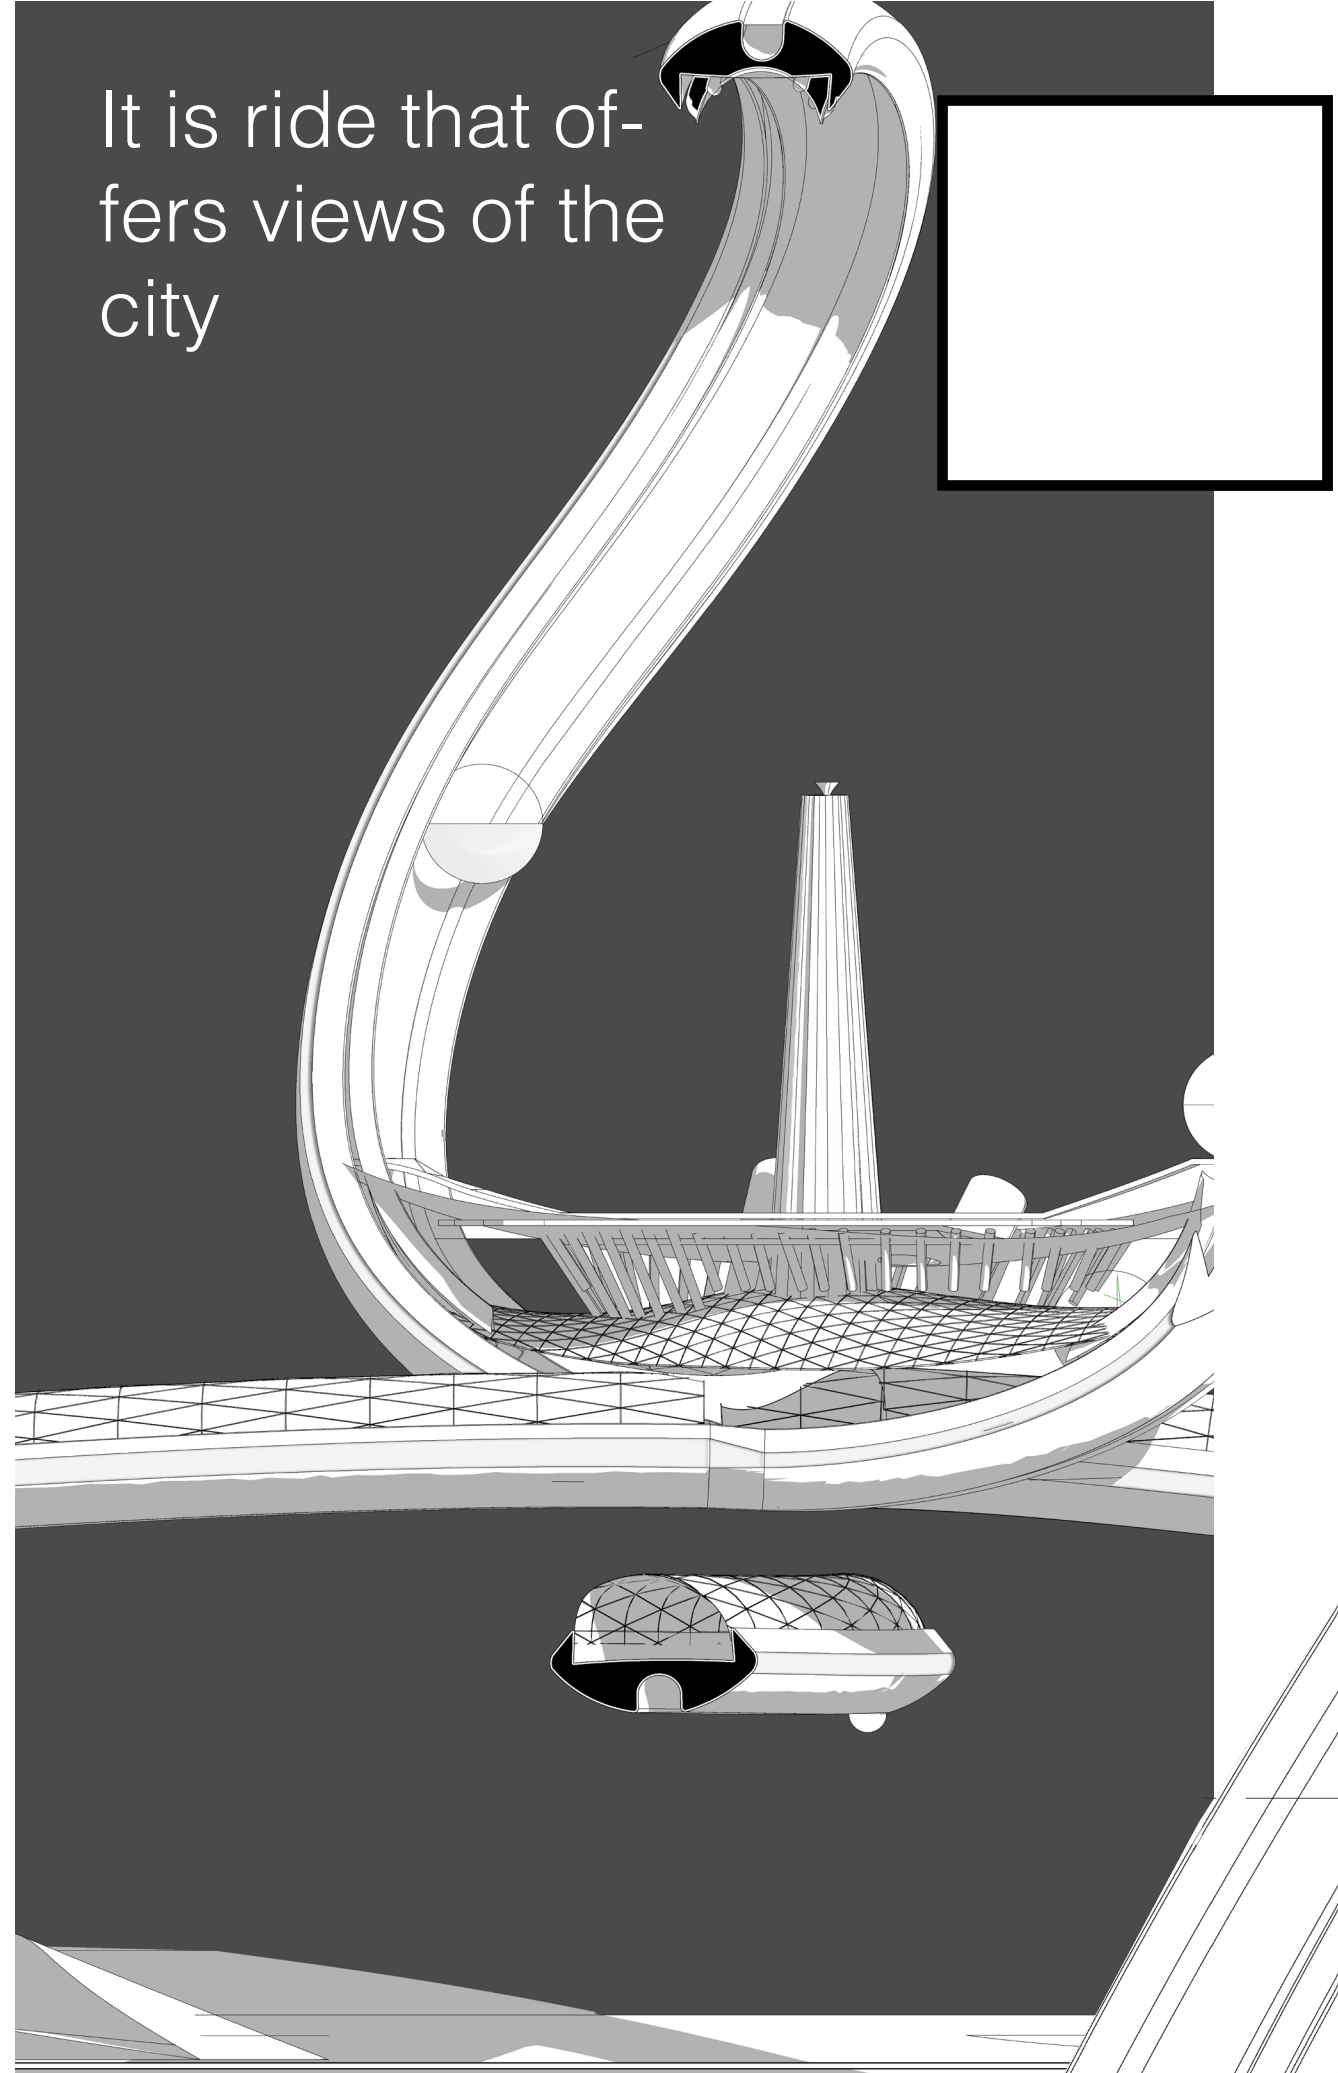

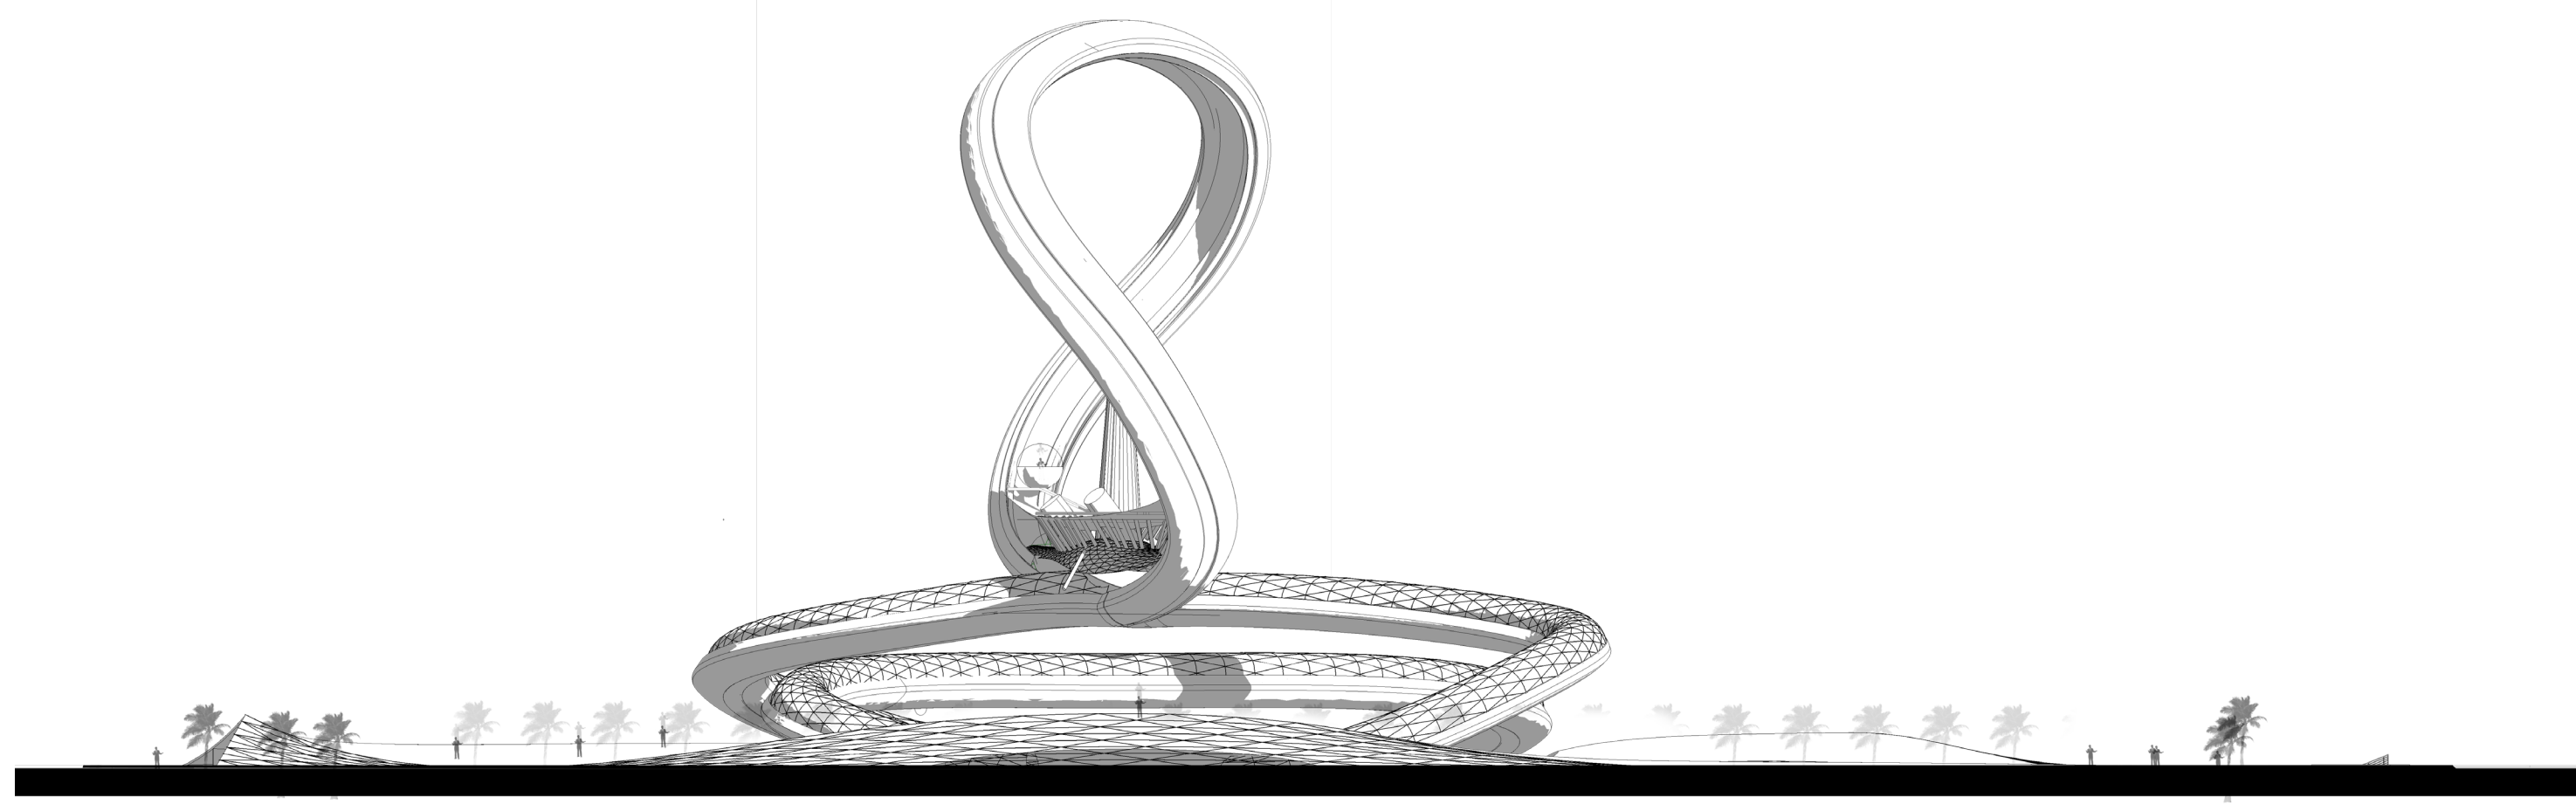

Solar Roofs

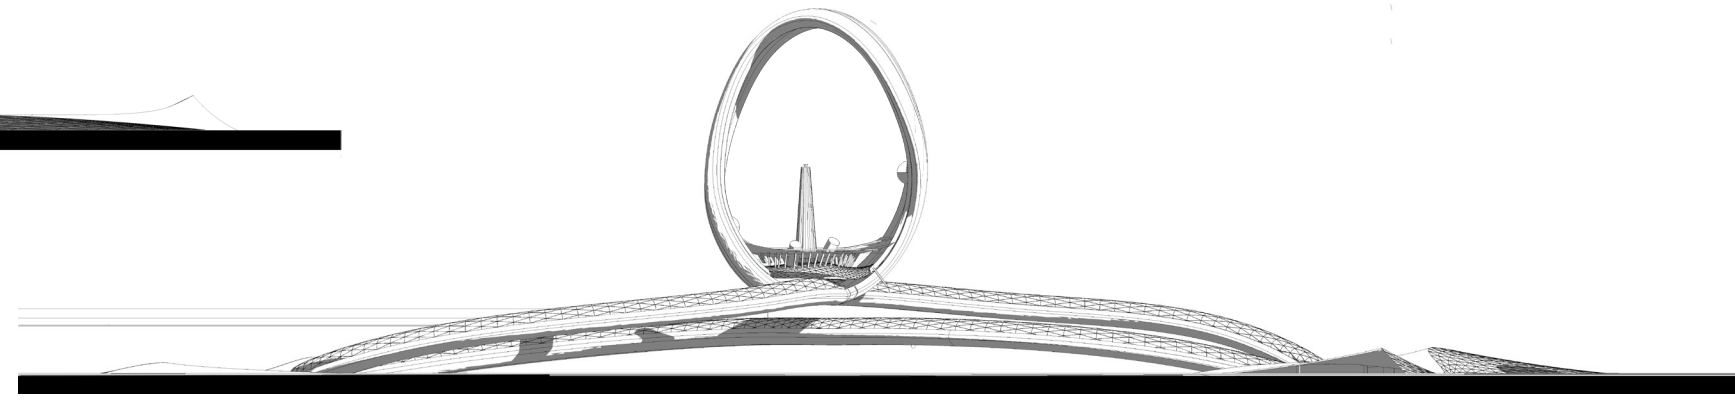

The lower level is used for system space
The Upper Level is a gallery space for museum and two conference spaces.

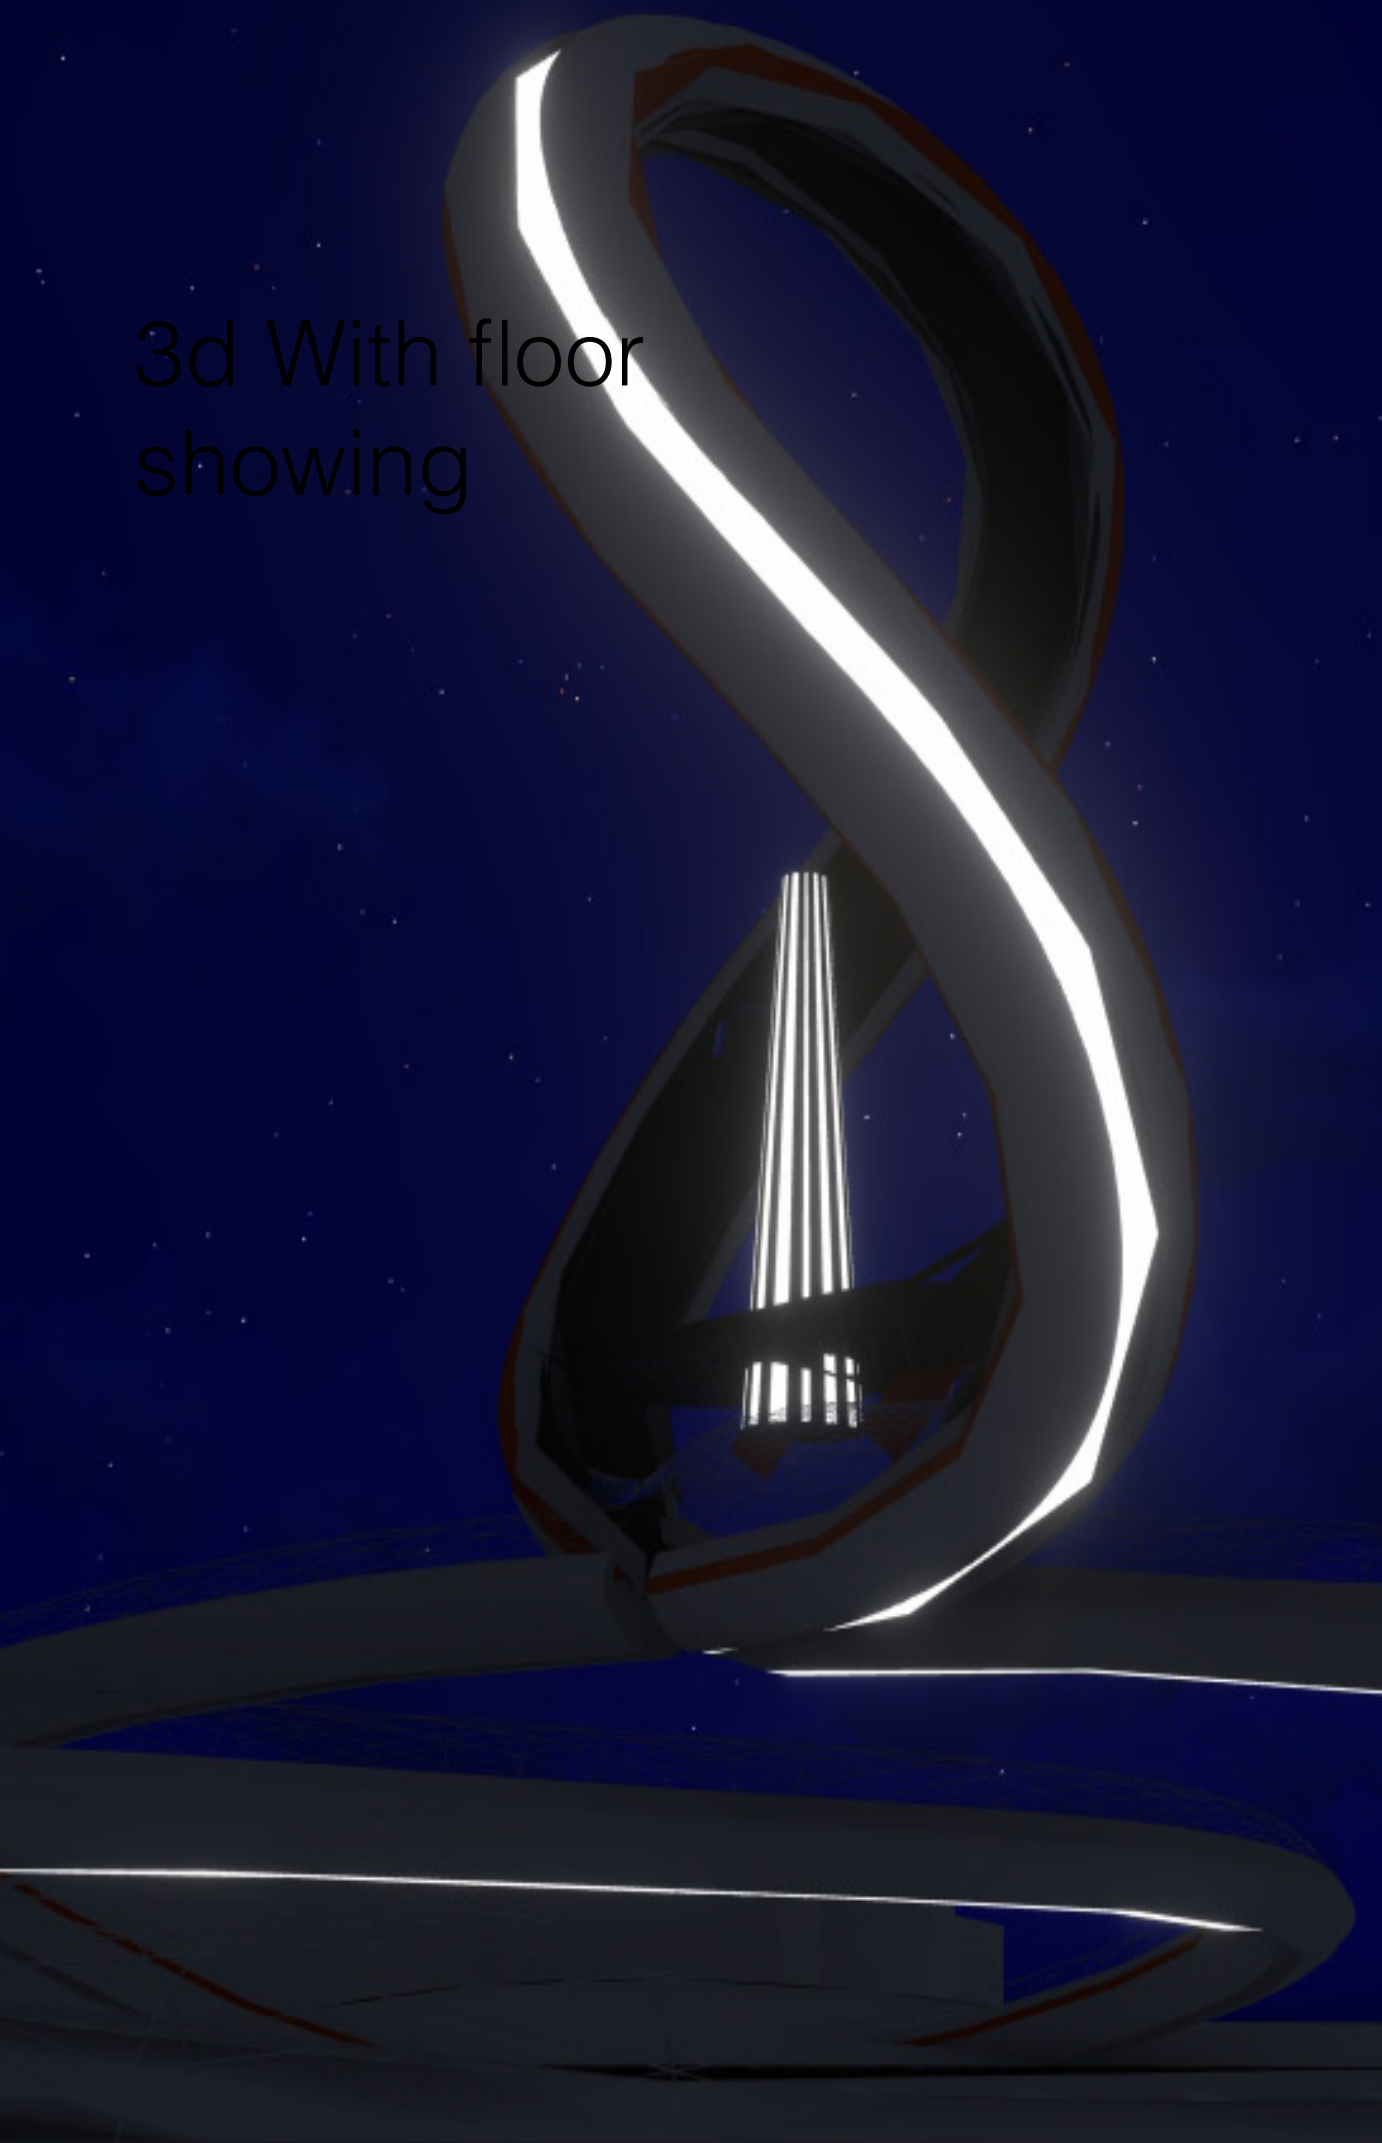

Plans

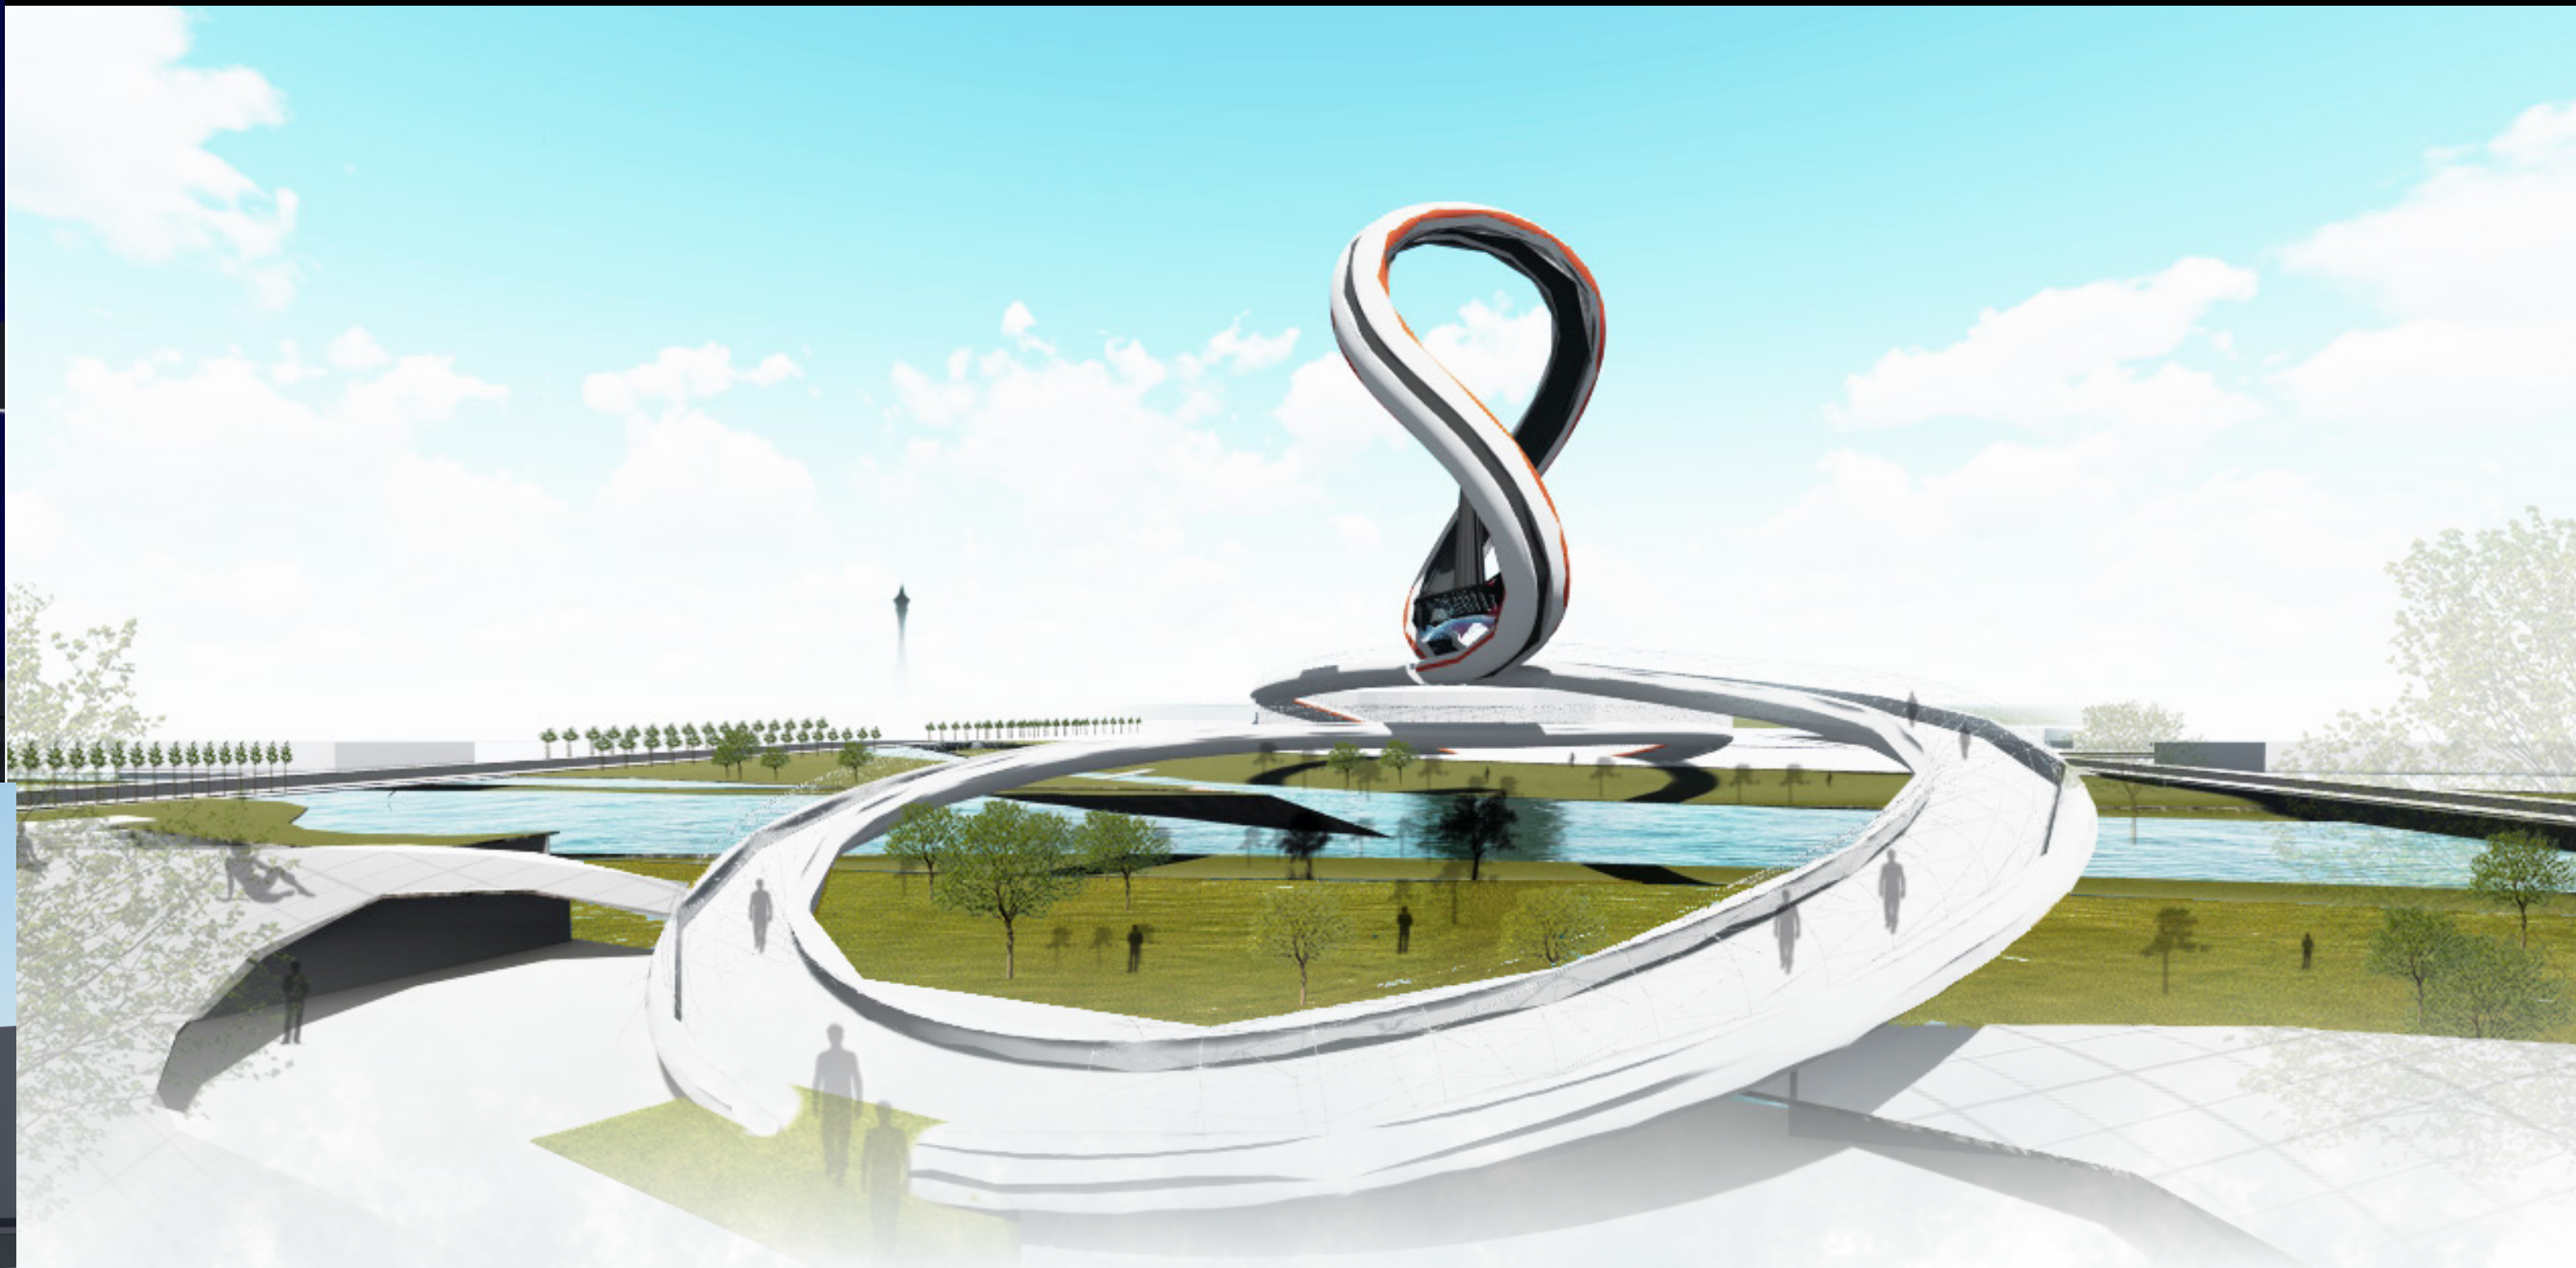

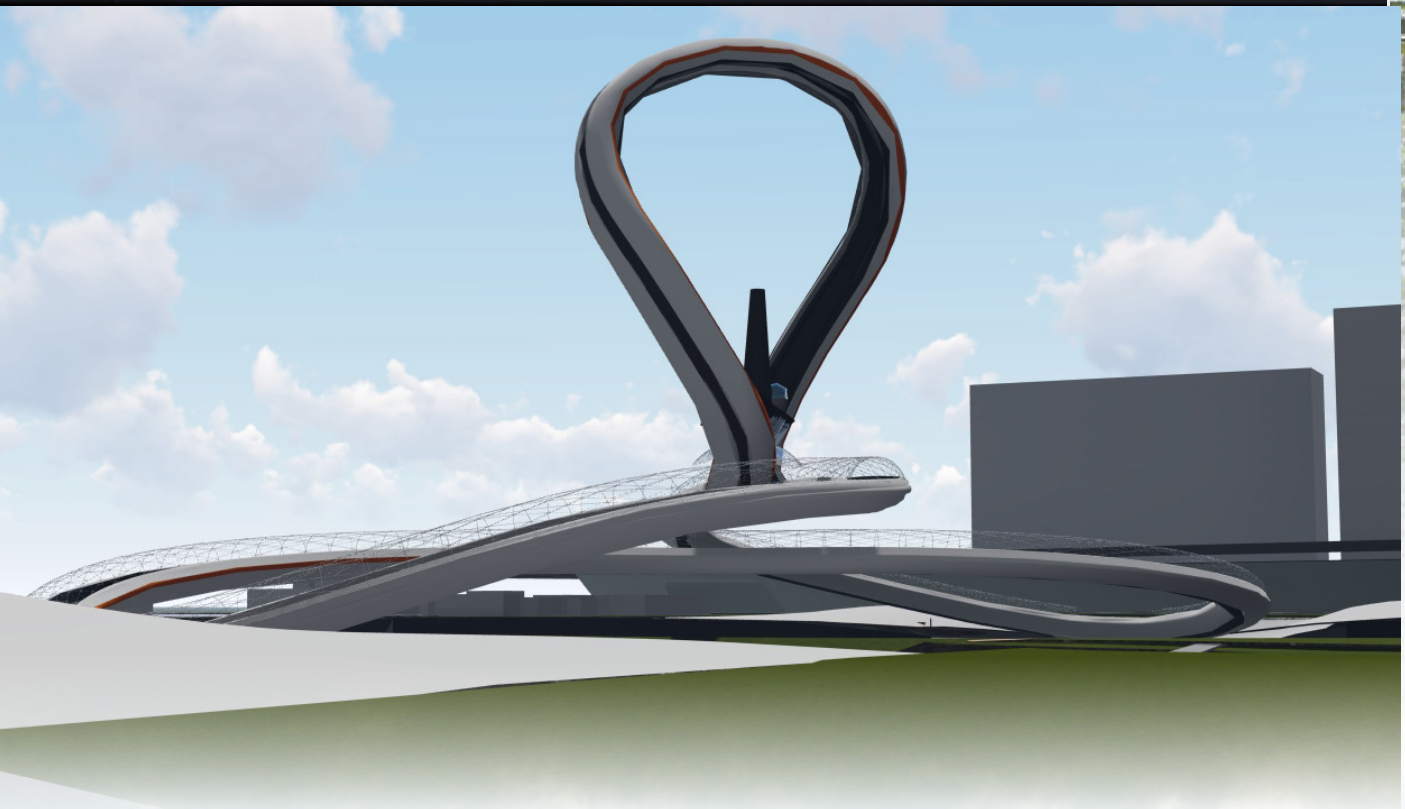

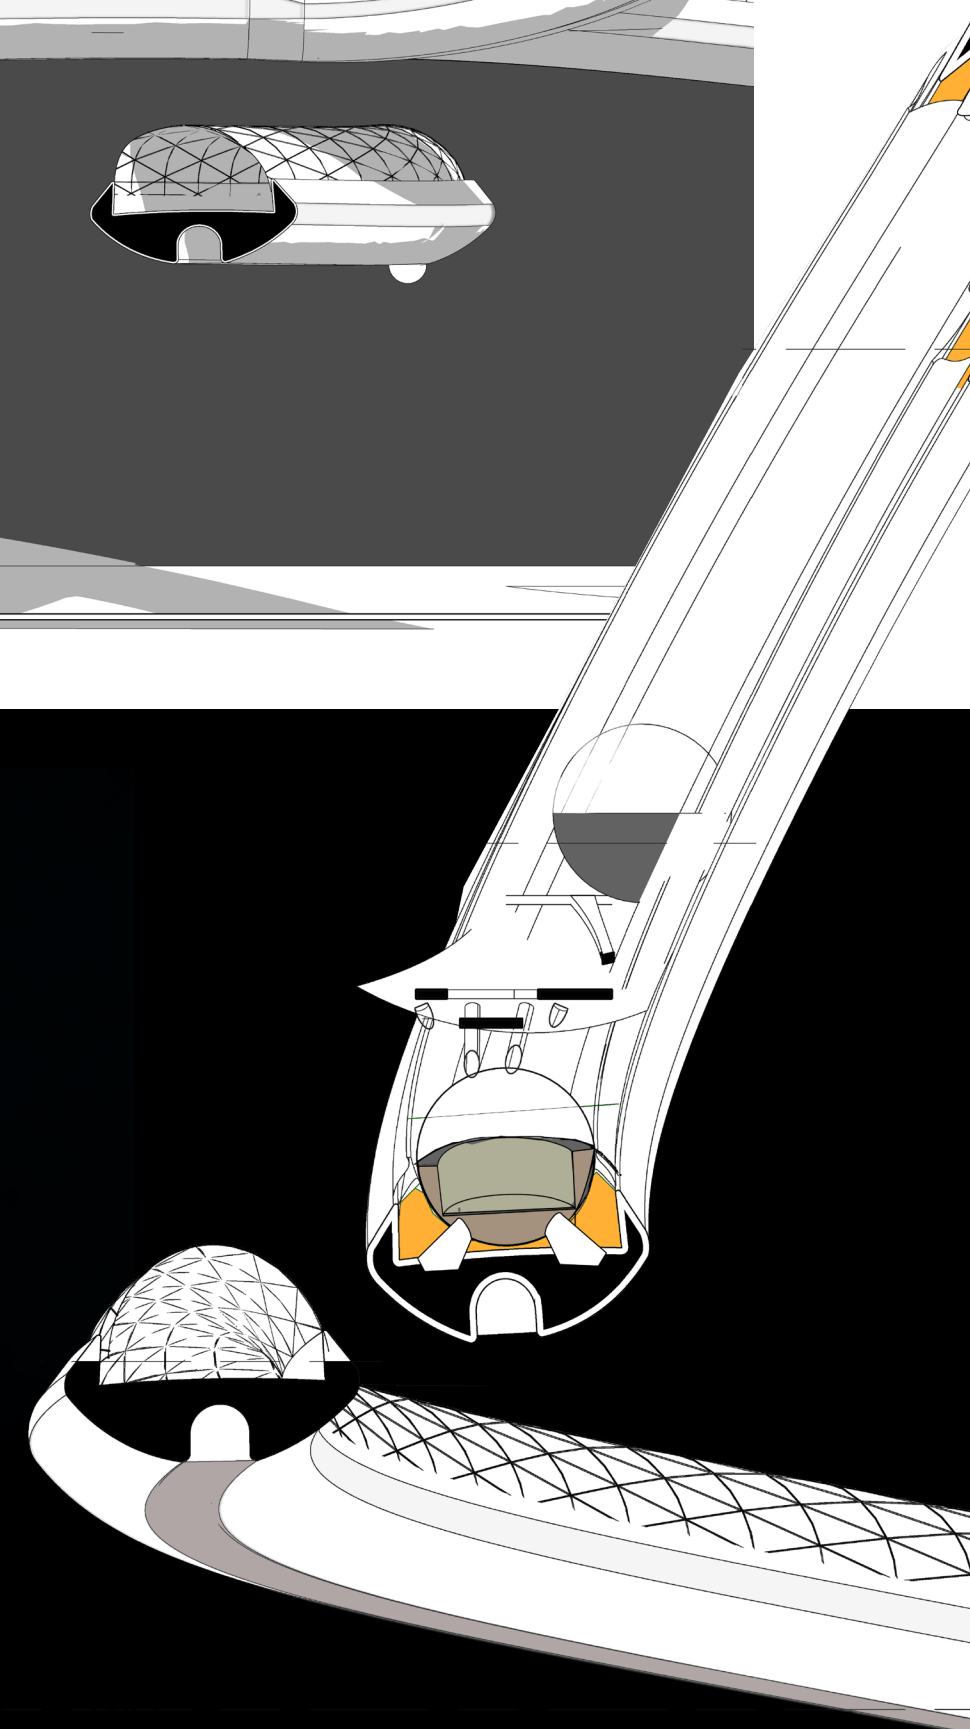

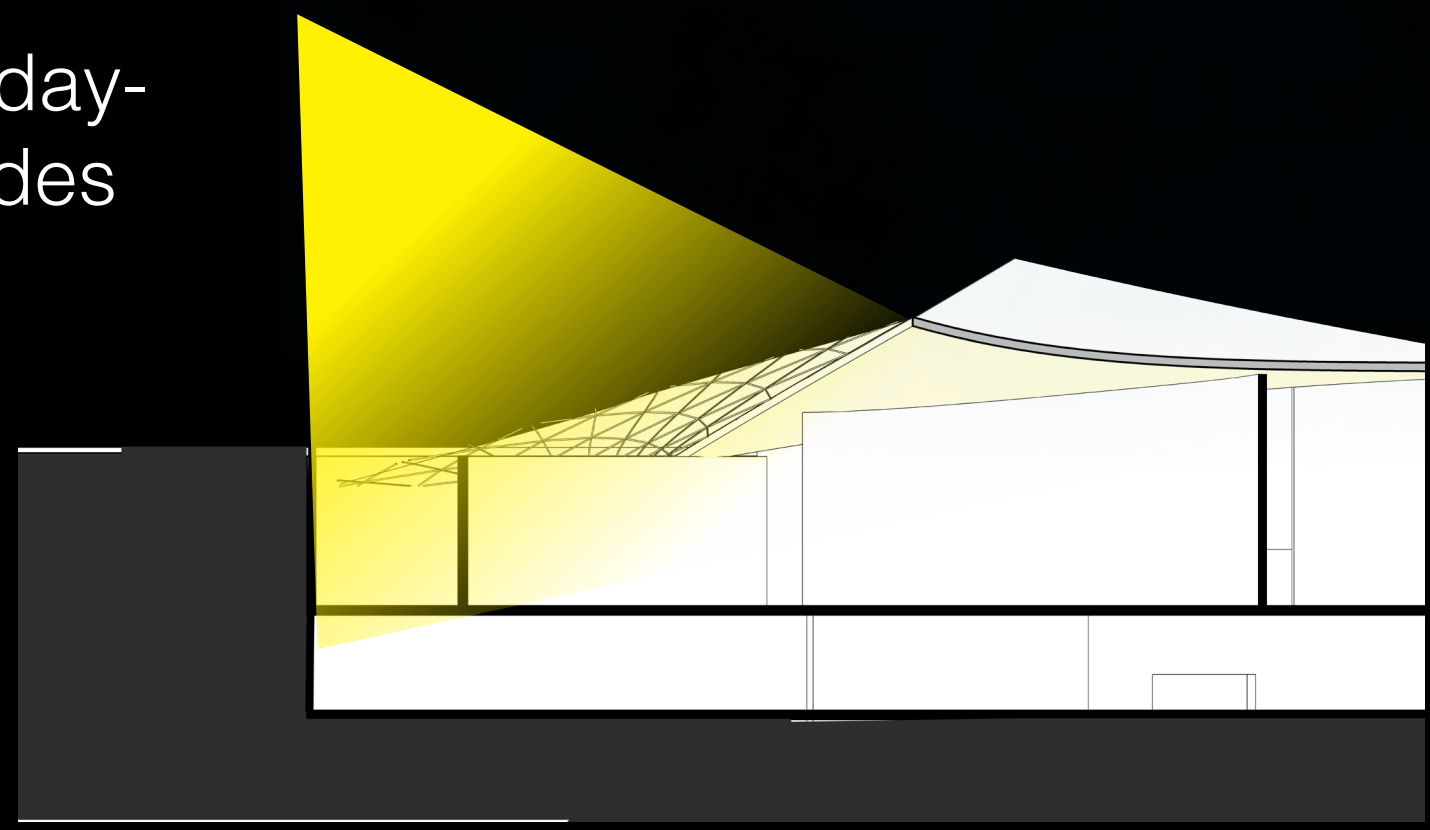

It is ride that offers views of the city

3d With floor showing

Netzero Approach
Roof is a solar harvester
Lower Levels use daylight with raised sides

Section Through the site showing the spaces and the monument.
