

## ***ProjectSummary.doc***

The “Silicon Valley Landmark Icon” is a co three parts composition: first, an eagle grubbing the American flag (as an American Icon), second, accommodates on its flag a symbolic inventor head characteristic to the Annual Invention Festival of Silicon Valley (the head has gears and genetic spirals) and third, the Earth Norther Hemisphere in which is inserted the American Iconic Flag and Eagle, (which can rotate inside the Earth’s architectural structure if desired). In this case the Silicon Valley Landmark Icon will change its shape and view; the gears inside that head will be in motion. The lighting solution will be the last choice. The plan is to be use a self-sustaining system to produce electricity (new).
