

Project Summary

Confluence Valley - ATower of Light

The Tower develops a simple structure - like Wings lifting to the Sky - launching several circular floors, transparent with the close and distant Landscape.

The vertical connection of all the circular floors is achieved by transparent elevators / lifts and sets of wide stairs.

Artificial lighting builds up interesting perspectives at night and is coordinated with all environmental concerns.

Sustainability and energy efficiency are part of the project from early stages and develop in close connection with all Engineering, Informatic, Robotic and Landscape Specialities.
