

Bridge of Light

Is it possible to connect two spaces separated by a third larger space?

Is it possible to connect them using light resulting in a spectacular outdoor installation?

My answer is **Bridge of Light**. It is about the universal idea to join and connect. It aims to propel this metaphor and sketch it out over the site using light. Shrinking space and subtly illuminating its surrounds with a soft changing glow. A floating membrane connecting one place to another, utilizing cutting edge technology, actively responding to lighting conditions of each passing day.

All powered by the California Sun.
