

## LOOP

Being able to view the existing from a new perspective is one of the most important factors that transform the cycle into development. In this context, the circle is chosen from the basic geometric forms as a symbol of the cycle in nature and the development in technology. The Circle was designed as a “vista point” to give a new point of view to the Silicon Valley, which is one of the important benchmarks of development and progress in this project.

While the silhouette of the symbolic circle that hangs in the air as if it were always there, offers a fictitious atmosphere to the users, a design that has been designed by implementing the basic concepts of the “tensegrity” structure principle by using steel ropes has been designed.

The bridge, designed with amorphous steel ropes and carriers that allow us to implement the tensegrity system, as well as its monumental design, is also considered as a pause that contributes not only to a transition but also to social life in the park, which is divided into two with the Guadalupe river and Los Gatos stream. Thus, the bridge becomes an element that connects not only the two sides but also the idle river and the human.

In order not to adversely affect the life cycles of living things, the area where we sit on hard ground on the land was kept to a minimum. In addition, in the context of the net-zero approach, it is aimed to meet not only the electrical energy required for itself, but also the energy needs of the park and surrounding areas by placing solar panels on the south side of the circle. In addition, in order to comply with the natural habitat in the area where the park is located and not to create light pollution, it has been proposed to use only lighting using the energy obtained from solar panels in the flying circle.

When we gather all the design criteria in the design, what we want to think about is to state that we, as all living things, are all in the same cycle and that the combination of nature and technology is the power that will keep this cycle in the healthiest way.

Say every time you look at this design; where are you in this cycle?

Are you touching the nature, or is it to you?
