

Silicon's North

Throughout history, the icons have served, to identify civilizations and used, as a visual reference: Obelisks, Pyramids. As well as the development of a society: Eiffel Tower, San Francisco Bridge. Or simply they were created to play an important role in the social activities of the city, Roman Coliseum, Theaters, Agoras. The truth is that each Civilization created and possesses an Architectural structure characteristic of what they meant in history to this day. This building aims to be exactly the same, a great monument that does not escape the sight of anyone and highlights the technological and scientific values for the progress of humanity. We know that we live in the era of technological growth, therefore, Silicon Valley has stood out as the leader and pioneer of this world movement, It is in this way that we honor such a creative and advanced society, pushing the parameters of physics to the limit, such as no one has ever explored them. We present two (2) bodies; one (1) heavy and other light. The heavy one sitting on the ground and the other floating in space. The large heavy body, projected in concrete, supports and generates a counterweight, so that the light and metallic element rests on it, using tensioners. The heavy element is clad in solar panels to collect the energy that is going to be consumed, distributing it to its large Plaza on the ground floor, with lights for all the roads, water sources and floating volume, is designed in black to emulate silicon and the light element in metal, designing it with the parametric structure method, which would be impossible to calculate without advanced computer equipment. These structures, in addition to being a monumental reference, demarcate a fairly clear axis that points North in such a way that anyone can quickly locate themselves. Symbolically the North points to the future of humanity and reminds us where we are going to. Finally, we project a large Plaza to incorporate Silicon Valley society, where all kinds of activities are

carried out; cultural, tributes and celebrations. In addition to other social actions that accompany the services of; shops, restaurants, cafes and other services for locals and tourists. It is necessary to highlight that the height of the floating platform (200ft), allows us to appreciate two (2) great events of the day: sunrise and sunset. With a beautiful 360 ° view.
