

THE STAIR:

The project presents an Iconic stair as a landmark in a park. The highest elements are positioned to be the focus of views from Historic San Jose Market as well as streets in The Downtown West plan area; visually linking and becoming a cognitive center.

The concept celebrates light day and night. Daylight explorations in various experiential paths are highlighted by an internal 80' diameter spherical volume with constellations of points of daylight. Night lighting includes digital surfaces in the cuts through the stair, 200' light columns and light from inside the daylight apertures.
