

The project is a holistic object based on green hills. It has four fulcrum. The structural basis is a metal frame. Solar panels are located on the roof of the building. Inside it is possible to place an arboretum, a co-working center, a museum or exhibition rooms, playrooms for children, a science cafe, a cinema, a recording center for creating music tracks, and a recording studio. The lower part of the structure is hidden under the green hills. At night, the building is illuminated by linear lighting outside the facade at the levels of the protruding parts.
