

ANGEL of HOPE, COMPASSION & INCLUSION to lead us from darkness into a new post covid world.

HOPE

This design reflects the essence of human life. It is about the capacity to be resilient against all manner of challenges- natural or manmade. It is about having hope, spreading love, compassion, tolerance and inclusion amongst living beings. Above all it is about building harmony and solidarity among cultures, work ethics, people and the nature. In many ways San Jose is a symbol of all that and, perhaps, much more. The proposed design seeks to capture this confluence of ideas.

ANGEL

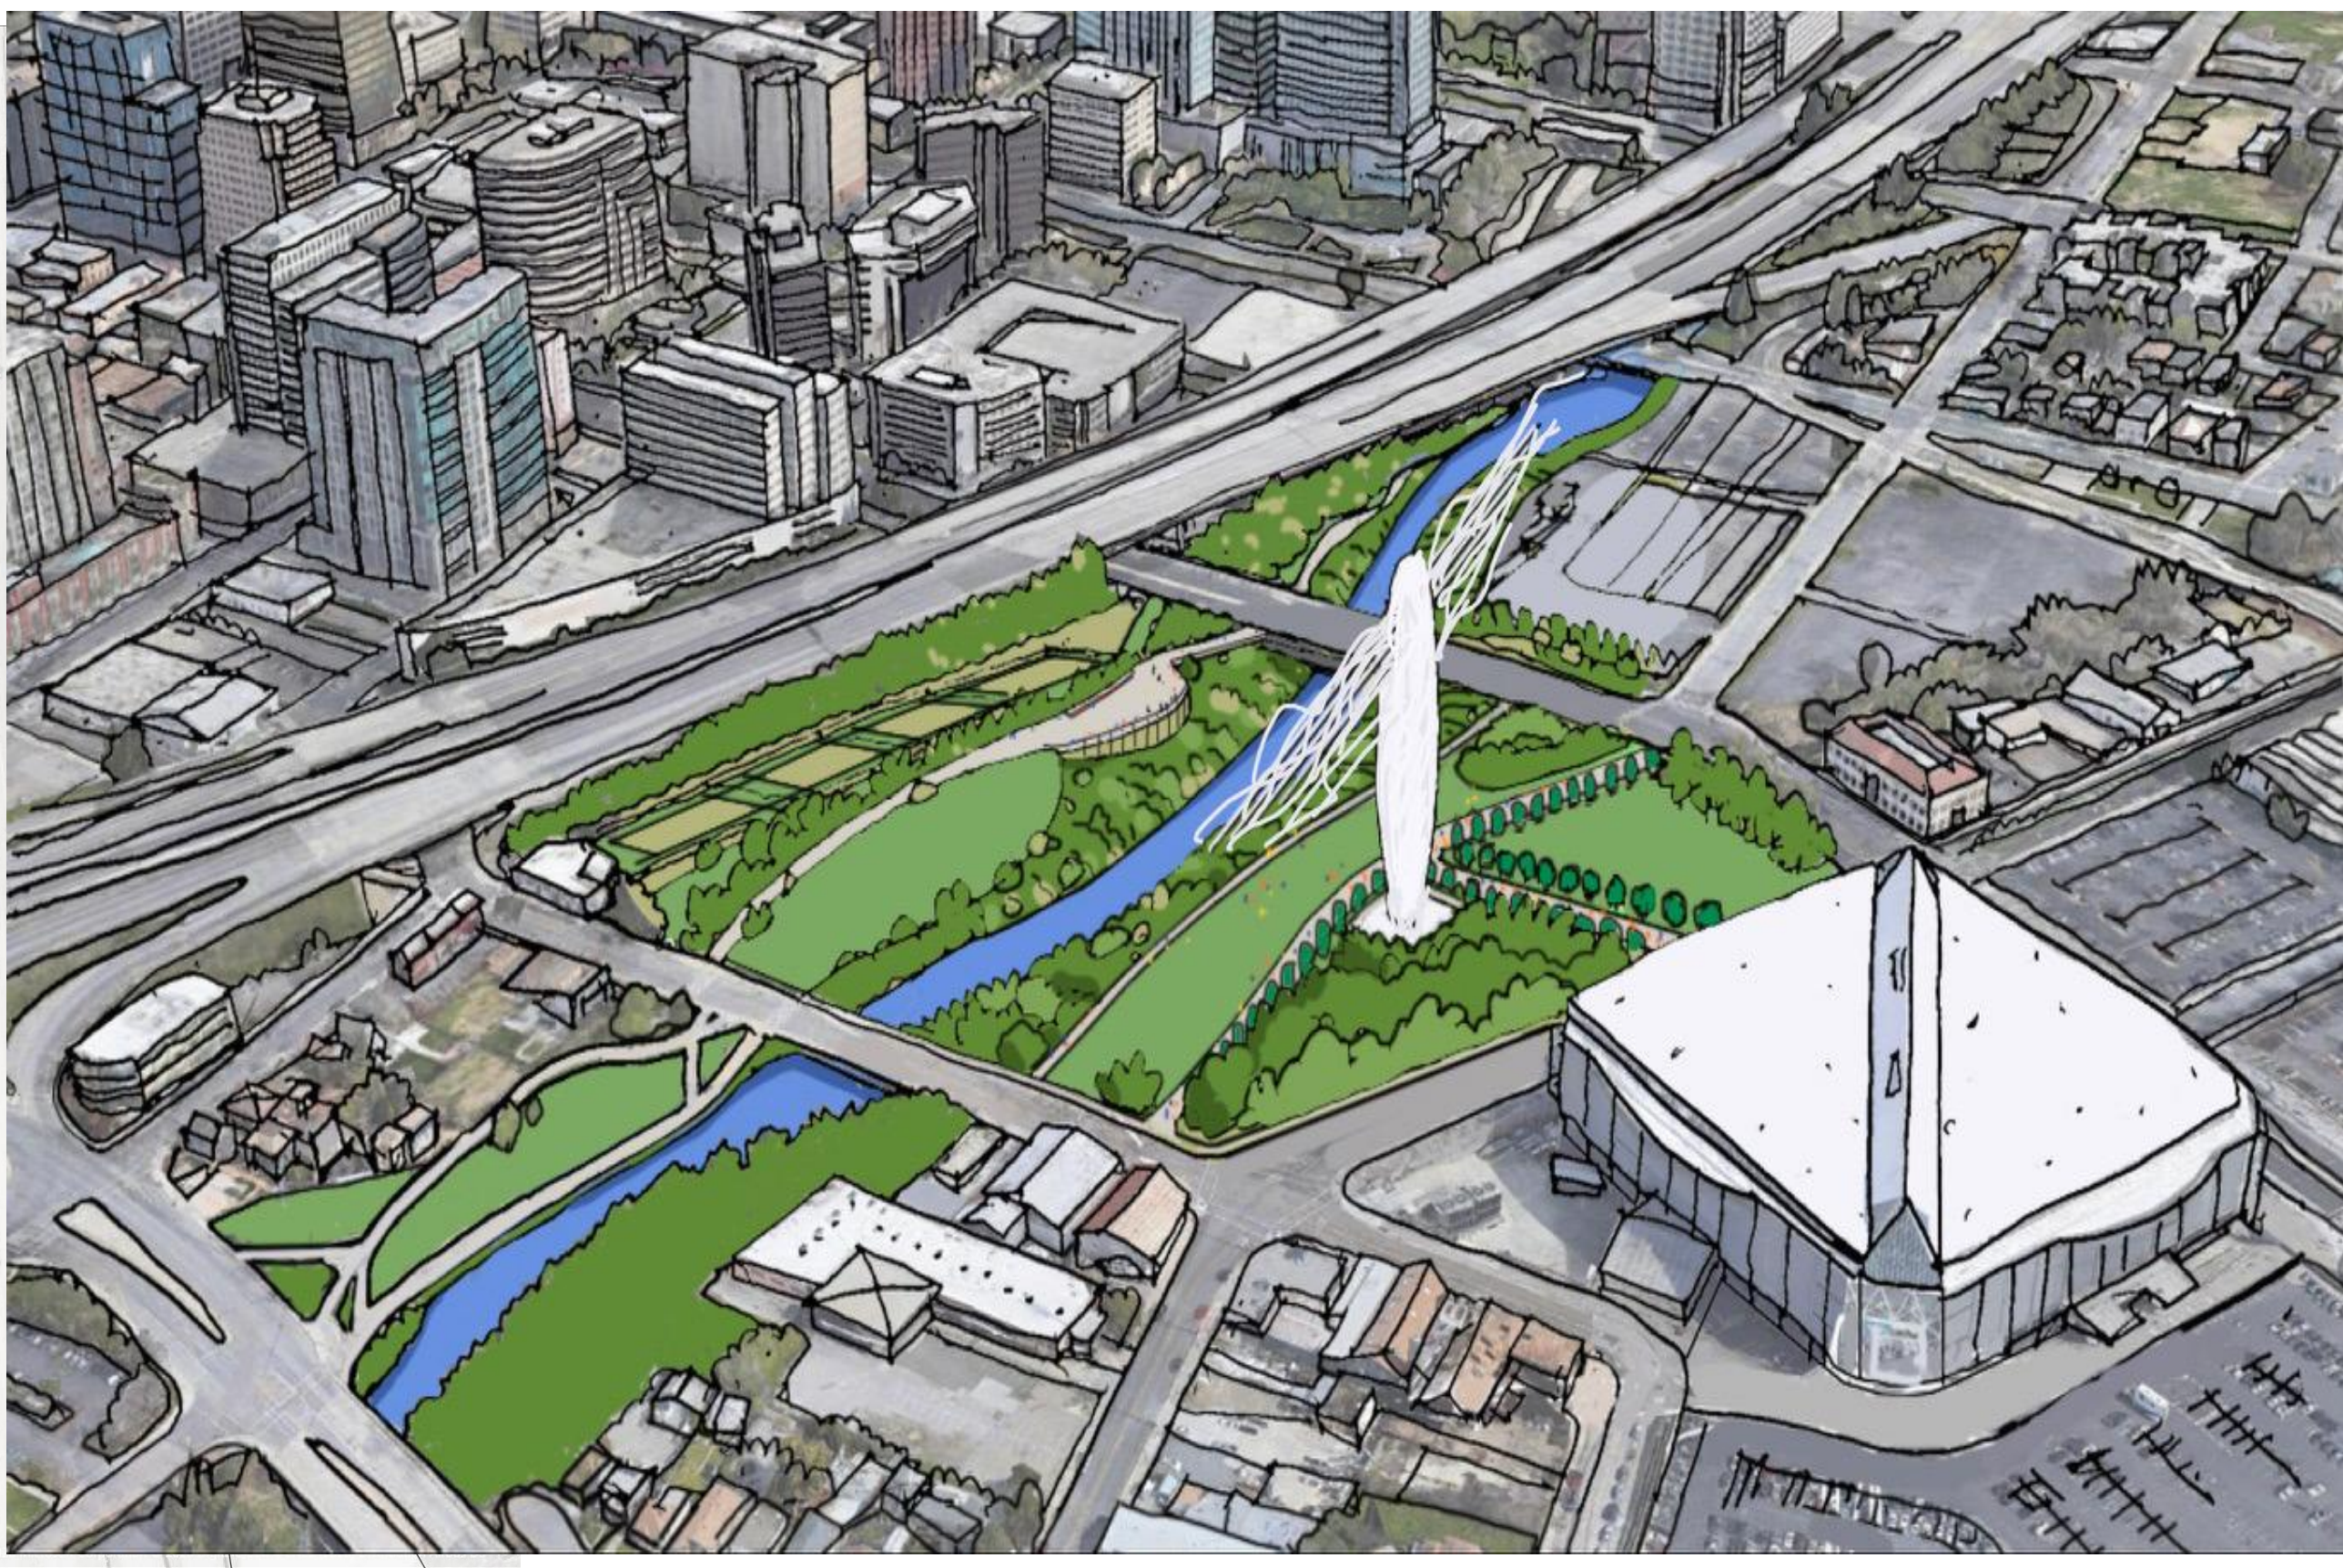

“Angel of Hope” represents human emotions which have created growth and development on the Planet. The main structure of the monument represents life in the form of cosmic energy representing confluence of spirituality.

It is an abstraction of an Angel, a non-denominational representation of the spiritual values of mankind.

It is 200’ tall and 400’ in the wingspan and will be constructed in metal structure with perforated metal cladding and free form tubes to form the wing structure

The human instinct of hope, compassion, tolerance, love, affection has always triumphed over animal instinct of anger, greed and discrimination. The importance of science and spirituality cannot be ignored for our future. Our design for the monument is based on these principles.
