

Voids

form - derived from the concept of cloud data that is related to the human data age. The space in which the current data is displayed in this way. The data is in the form of horizontal void in a vertical void that is metaphorically considered as a cloud-like space.

Function-The defense mechanism of the data age for the only man is to create a collective space with different functions that are appropriate to this period. Creating a sense of satisfaction in being in a collective space by defining new uses that can be the beginning of another kind of pleasure in human beings by architecture.

Material - Vertical void is made of transparent concrete, which can provide the energy required by the set by placing energy-absorbing technologies according to its significant surface.

Horizontal voids in the outer part is made of composite sheets and in the inner part is made of the silicone veneers that are stretched on the mechanical arms, which at the same time, due to its elasticity to create the desired functions, can find meaning with its adjacent site, Silicon Valley.
