

The Perfect Balance – Project Summary – 100 Words

The Perfect Balance is a living monument that moves in reaction to human presence, i.e. based on the number and distribution of people walking on it. Designed as a circular walkway, it connects visitors to the park whilst providing areas for community activation.

Shifts in weight resulting from movement on the walkway gently tilt the central structure. This way, the monument is perpetually in motion, symbolizing humanity's restless intent to innovate and discover. The kinetic motion is stored resulting in a net-zero energy strategy.

A monument without a definite form that enables endless configurations in harmony with humans and nature.
