

The **Tension Spheres** are lightweight tensile structure systems with cables and fabric configured in radial forms. The three larger West Side spheres and the five smaller East Side spheres use either internal radial struts or external struts with guy cables. The West Side and East Side structural systems give landmark form to the urban confluence.

eSports tournaments and events are the basis for programming and form generation. Many other events could be hosted.

The eight **Tension Spheres** consist of:

- 120' diameter **Sphere-Inx** = Ferris Wheel + Carousel
- 100' diameter arena space
- 80' diameter event space
- five 60' diameter event spaces
