Project Summary

the Bitarch is an architectural fusion of a binary digit and an arch. Essence of digital computation with ancient dualist cosmology at background can simply be symbolized with zero and one. And the arch as a landmark transcends ages, symbolizing urbanism and civilization. Hereby, we have an expressionist portal for the city that is known for its pivotal place in the digital age. The Bitarch, a thematic portal of confluence aims to be a catalyst for Arena Green and the city by alluring people to itself then inviting them to enjoy their city from itself thanks to its viewing terrace.
