

Welcome to INFINITY GARDENS, a celebration and exploration of the infinite cycles of nature, culture, technology and innovation. The garden elements are an integrated series of infinite experiences:

The INFINITY PLAZA is the grand arrival space. A landmark digital spire greets guests with stories of innovation as they begin their transformative journey through the garden.

The INFINITE LOOP is a serpentine trail that links all elements of the site and symbolizes the infinite connections and cycles of nature, culture, technology, and innovation.

The INFINITY TOWER is the iconic centerpiece of the site and integrates vertical gardens, a solar skin, viewing terraces, observatory platform, museum, restaurant, retail, and theater. Rising 200', the net zero tower will be solar powered, and integrates gardens and lighting that will provide an array of spectacular and subtle effects for all occasions.

The INNOVATION MUSEUM celebrates innovation in all aspects of nature, technology, and culture. The exhibits and symposium theater set up a memorable guest experience linking past, present, and future stories of innovations. The museum gift shop and infinity Café can be sponsored to broaden the experiences within the site and add a revenue stream for the operators.

The TIMELESS BRIDGE connects the past, present, and future of innovation through stories and exhibits, with a range of viewing and exhibit areas.

The INFINITE LANDSCAPE embraces all site features and celebrates the beauty, biodiversity, harmony, and infinite cycles of the native landscape and ecology. Plazas, amphitheater, markets, and native plants will combine to create a diverse range of enduring spaces for any type of activity. The Amphitheater is a social center for seasonal events and performances linking the local community to the world.

INFINITE NET ZERO All site features will be net zero.

The vertical solar skin of the tower provides energy for the site and building, museum and café, providing natural air ventilation. The Amphitheater will retain harvested rain water to irrigate the site. The upper garden integrates a green roof, naturally cooling the museum and its spaces.

SPONSORSHIP and REVENUE GENERATION can supply short- and long-term finances for the project, providing for construction, maintenance, and programming, insuring the long-term sustainability of the project.

INFINITE SPIRIT Our goal is to inspire future generations to explore the world of innovation in all aspects of our lives. The infinite experiences of the iconic site will inform, educate, entertain, and illuminate the potential of innovation to advance humanity in the world's epicenter of innovation.
