

## **“Expedition in Time”**

A major site force Guadalupe river flows through the site. Our dominant design element, the bridge is placed across the river, connecting the other side. It metaphorically connects the past, present and future of “Silicon Valley”. Just like the river flows through the site, the timeline flows through the bridge. We call it “Expedition in Time”. A tour with an augmented reality will give us the experience of true “Silicon Valley”. We believe it is crucial for the visitors to learn about the glorious past, phenomenal present and the unknown yet incredible future of “Silicon Valley”.
