

The main goal of this project is to design a symbolic prototype tower to preserve plant species and pay attention to the future of the earth, as well as to attract visual attention through lighting. The design of the bridge without damaging the river can give both green space and circulation and dynamism to this area.

With a height of 60 meters, this 7 floors tower can give happiness and health of body and soul to the people of San Jose.

The tower can attract many visitors due to the presence of plants and good views of the surrounding landscape.
