

Horizons Park

A horizon is the furthest reach of our vision, a perfect fissure where the present meets an unknowable future. Horizons Park marks this moment in place and time, scribing it across land and sky. The Park's iconic structural feature is the astonishing "Event Horizon Sky-Walk," an undulating calligraphic gesture that literally and figuratively carries visitors to the sky and floats bamboo forests across the clouds.

Horizons Park's flowing horizontals embody the confluence of form and idea, agriculture and technology, creek and river, earth and sky, past and future . . . an iconic, optimistic global destination.
