

## **PROJECT SUMMARY FOR CONFLUENCE RISING**

We propose Confluence Rising, an iconic living tower that celebrates the confluence of nature, art and innovation. Visitors enjoy an entry plaza/café and experience panoramic views framed by lush plantings from balconies at every level culminating in a roof-top greenhouse and observation deck. Elevators and stairs provide access. Confluence Rising glows with programmable lighting at night and natural light during the day. Living walls, trees and cascading water clean and cool the air, soften urban noise, save floor space, and create new bird and pollinator habitats. Sustainable building materials and technology and reclaimed water irrigation invoke net-zero energy design principles.
