

ProjectSummary

Inspired by the halo from the art work and the natural phenomena, HALO is a ring-like structure that floats above the confluence of two rivers and the center of the city. People can walk on it and enjoy the cityscape in 360 degrees. Below the HALO, landscape and cityscape are framed by it and give people a new perspective of viewing. Besides, multiple special light effects created by water mist under the structure makes it a true focal point of the city, just like a halo radiating to every corner of the city, bringing light, hope, love and peace to everyone.
