

Three San Jose

In the gateway of Silicon Valley and at the confluence of two rivers, the world connects. Three San Jose stands tall embodying the magnitude of technological creation. It is shaped by a tensegrity structure composed of rigid structures and cables, which form a continuous field of tensions and compressions in equilibrium, creating a symbiosis between the people and the structure. With light slitting through its immensity, it connects the city's virtual, technological character to its raw physical qualities. Foot by foot, it refugees the visitors from the torrid sun and framed views surrounding the landscape.
