

The Ribbon follows a circular geometry in plan with an external diameter of 720 feet. Its arches rise to 200 feet on the South loop, 113 feet on the North loop and are connected through steel cables. Both loops are accessible via steps to provide views of the surroundings.

The Ribbon rests on two buildings that connect to the park via a sloped green roof, hosting cafes, restaurants and exhibition spaces.

The main structure is a rectangular steel frame. Its outer surface is covered with steel mesh and can be lit up at night, the upper surface holds solar panels.
