

PROGRAMMATIC CONFLUENCE: Shaping the Responsive Campus

PROJECT SUMMARY:

"Programmatic Confluence" reevaluates the relationship between public and tech space in the Bay Area. We generated a small scale plan with large scale impact for the redevelopment of Guadalupe Park by focusing our intervention on the demands of the city's social and ecological landscape. This confluence of programs happens through the interaction and blending of two architectural **ribbons**; the park-scape ribbon and the activation ribbon. These two components weave together throughout the park responding both to the site-specific design and public needs, generating a unique environment that reflects San Jose and its impact on the world through technological innovation.
