

This proposal:

- improves existing park conditions by creating new vantage observation points, connecting the river both sides running and bicycle tracks and providing its 24/7 usage
- provides an additional place for meetings, recreation and special events for the local community
- expands the viewers audience of events held in the SAP center or on the city streets by broadcasting these events on a virtual screen at the citywide level
- is ready to turn into a place of global interest by providing the opportunity to plunge into the world's first fragment of virtual reality.
