

The human desire for knowledge has no limits. Just like knowledge itself. Gaining and multiplying it humanity reaches for the stars. We suggest embodying the idea of the miracle of infinite knowledge in a project named The Core of Infinity. A visitor will be involved in history and the interlinking of scientific discoveries from antiquity to uncharted horizons.

The mathematical symbol of infinity turned into three-dimensional infinite surface. We'll illustrate the infinity of knowledge by creating an educational center shaped as a three-dimensional infinite surface showcasing technologies from primitive up to modernity and space colonization and back to basics.
