

# THE SAN JOSE SPHERE OF INFLUENCE

**100 Foot Diameter Sphere, Suspended 50 feet over creek bed in the Center of a 600 foot long bridge spanning the creek.**

Observation Deck on top accessible from inside sphere

After dark sphere is illuminated (LED or Projector System) to display graphics, video, animations, news, sports.

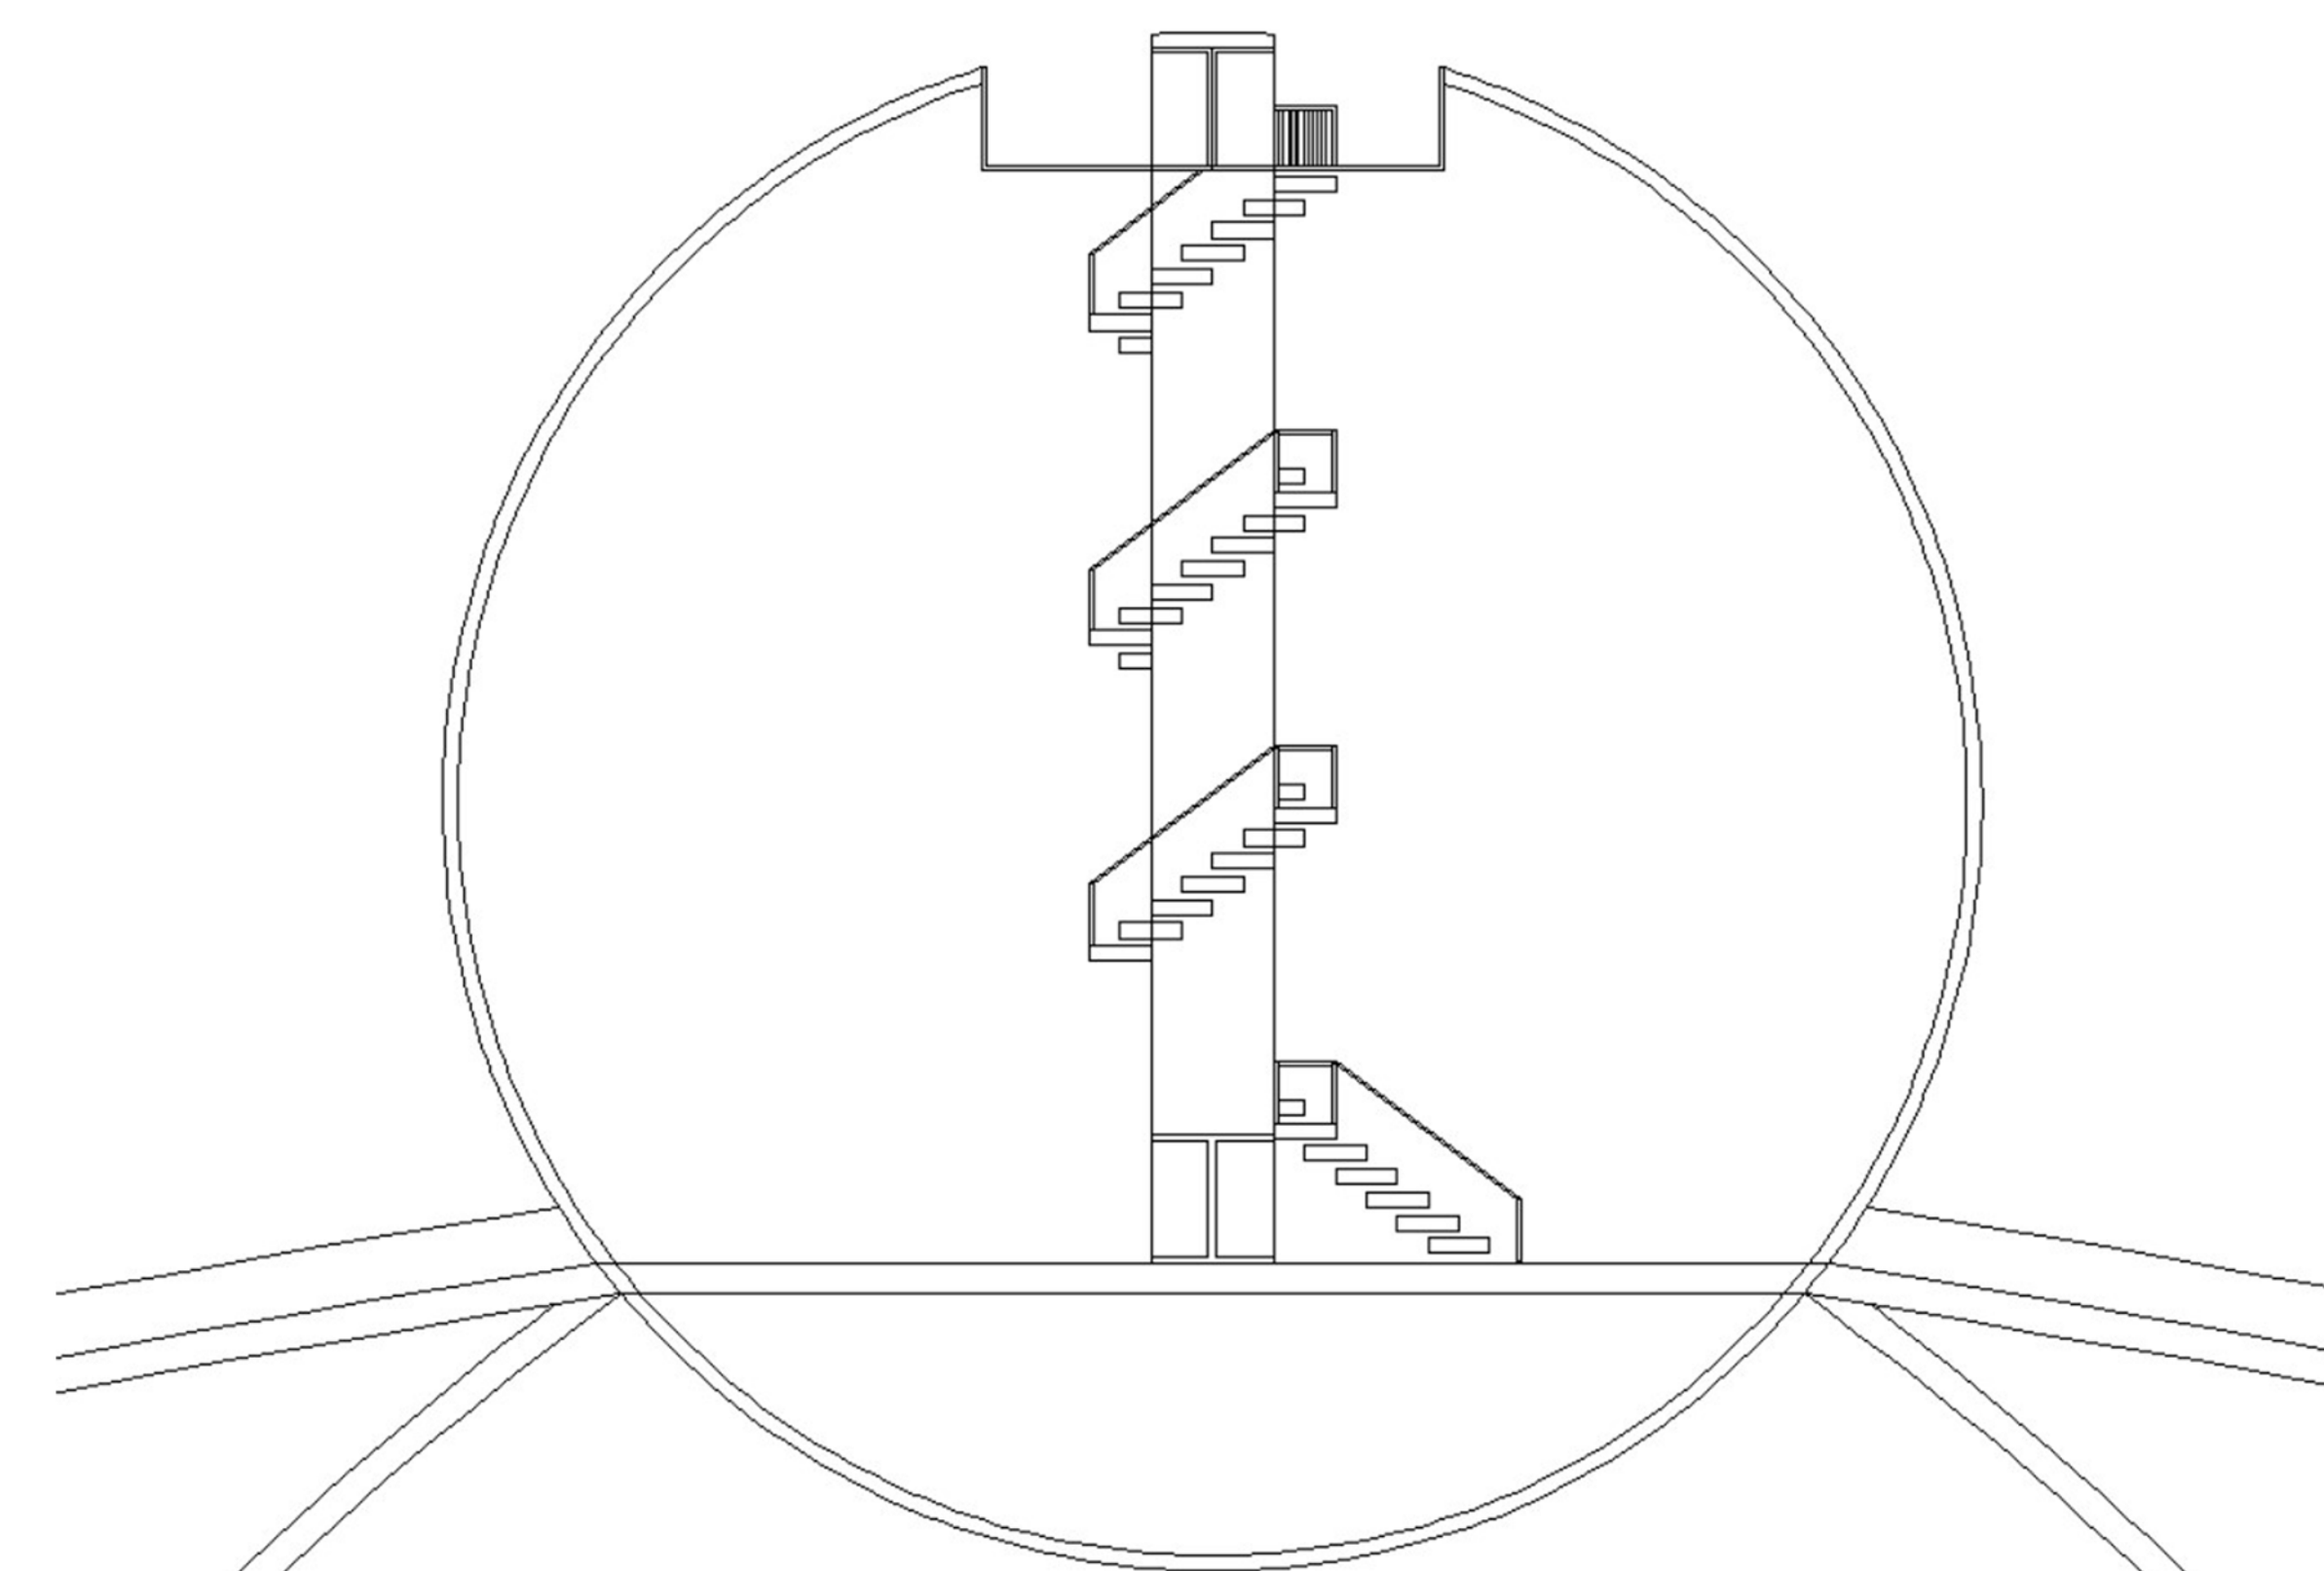

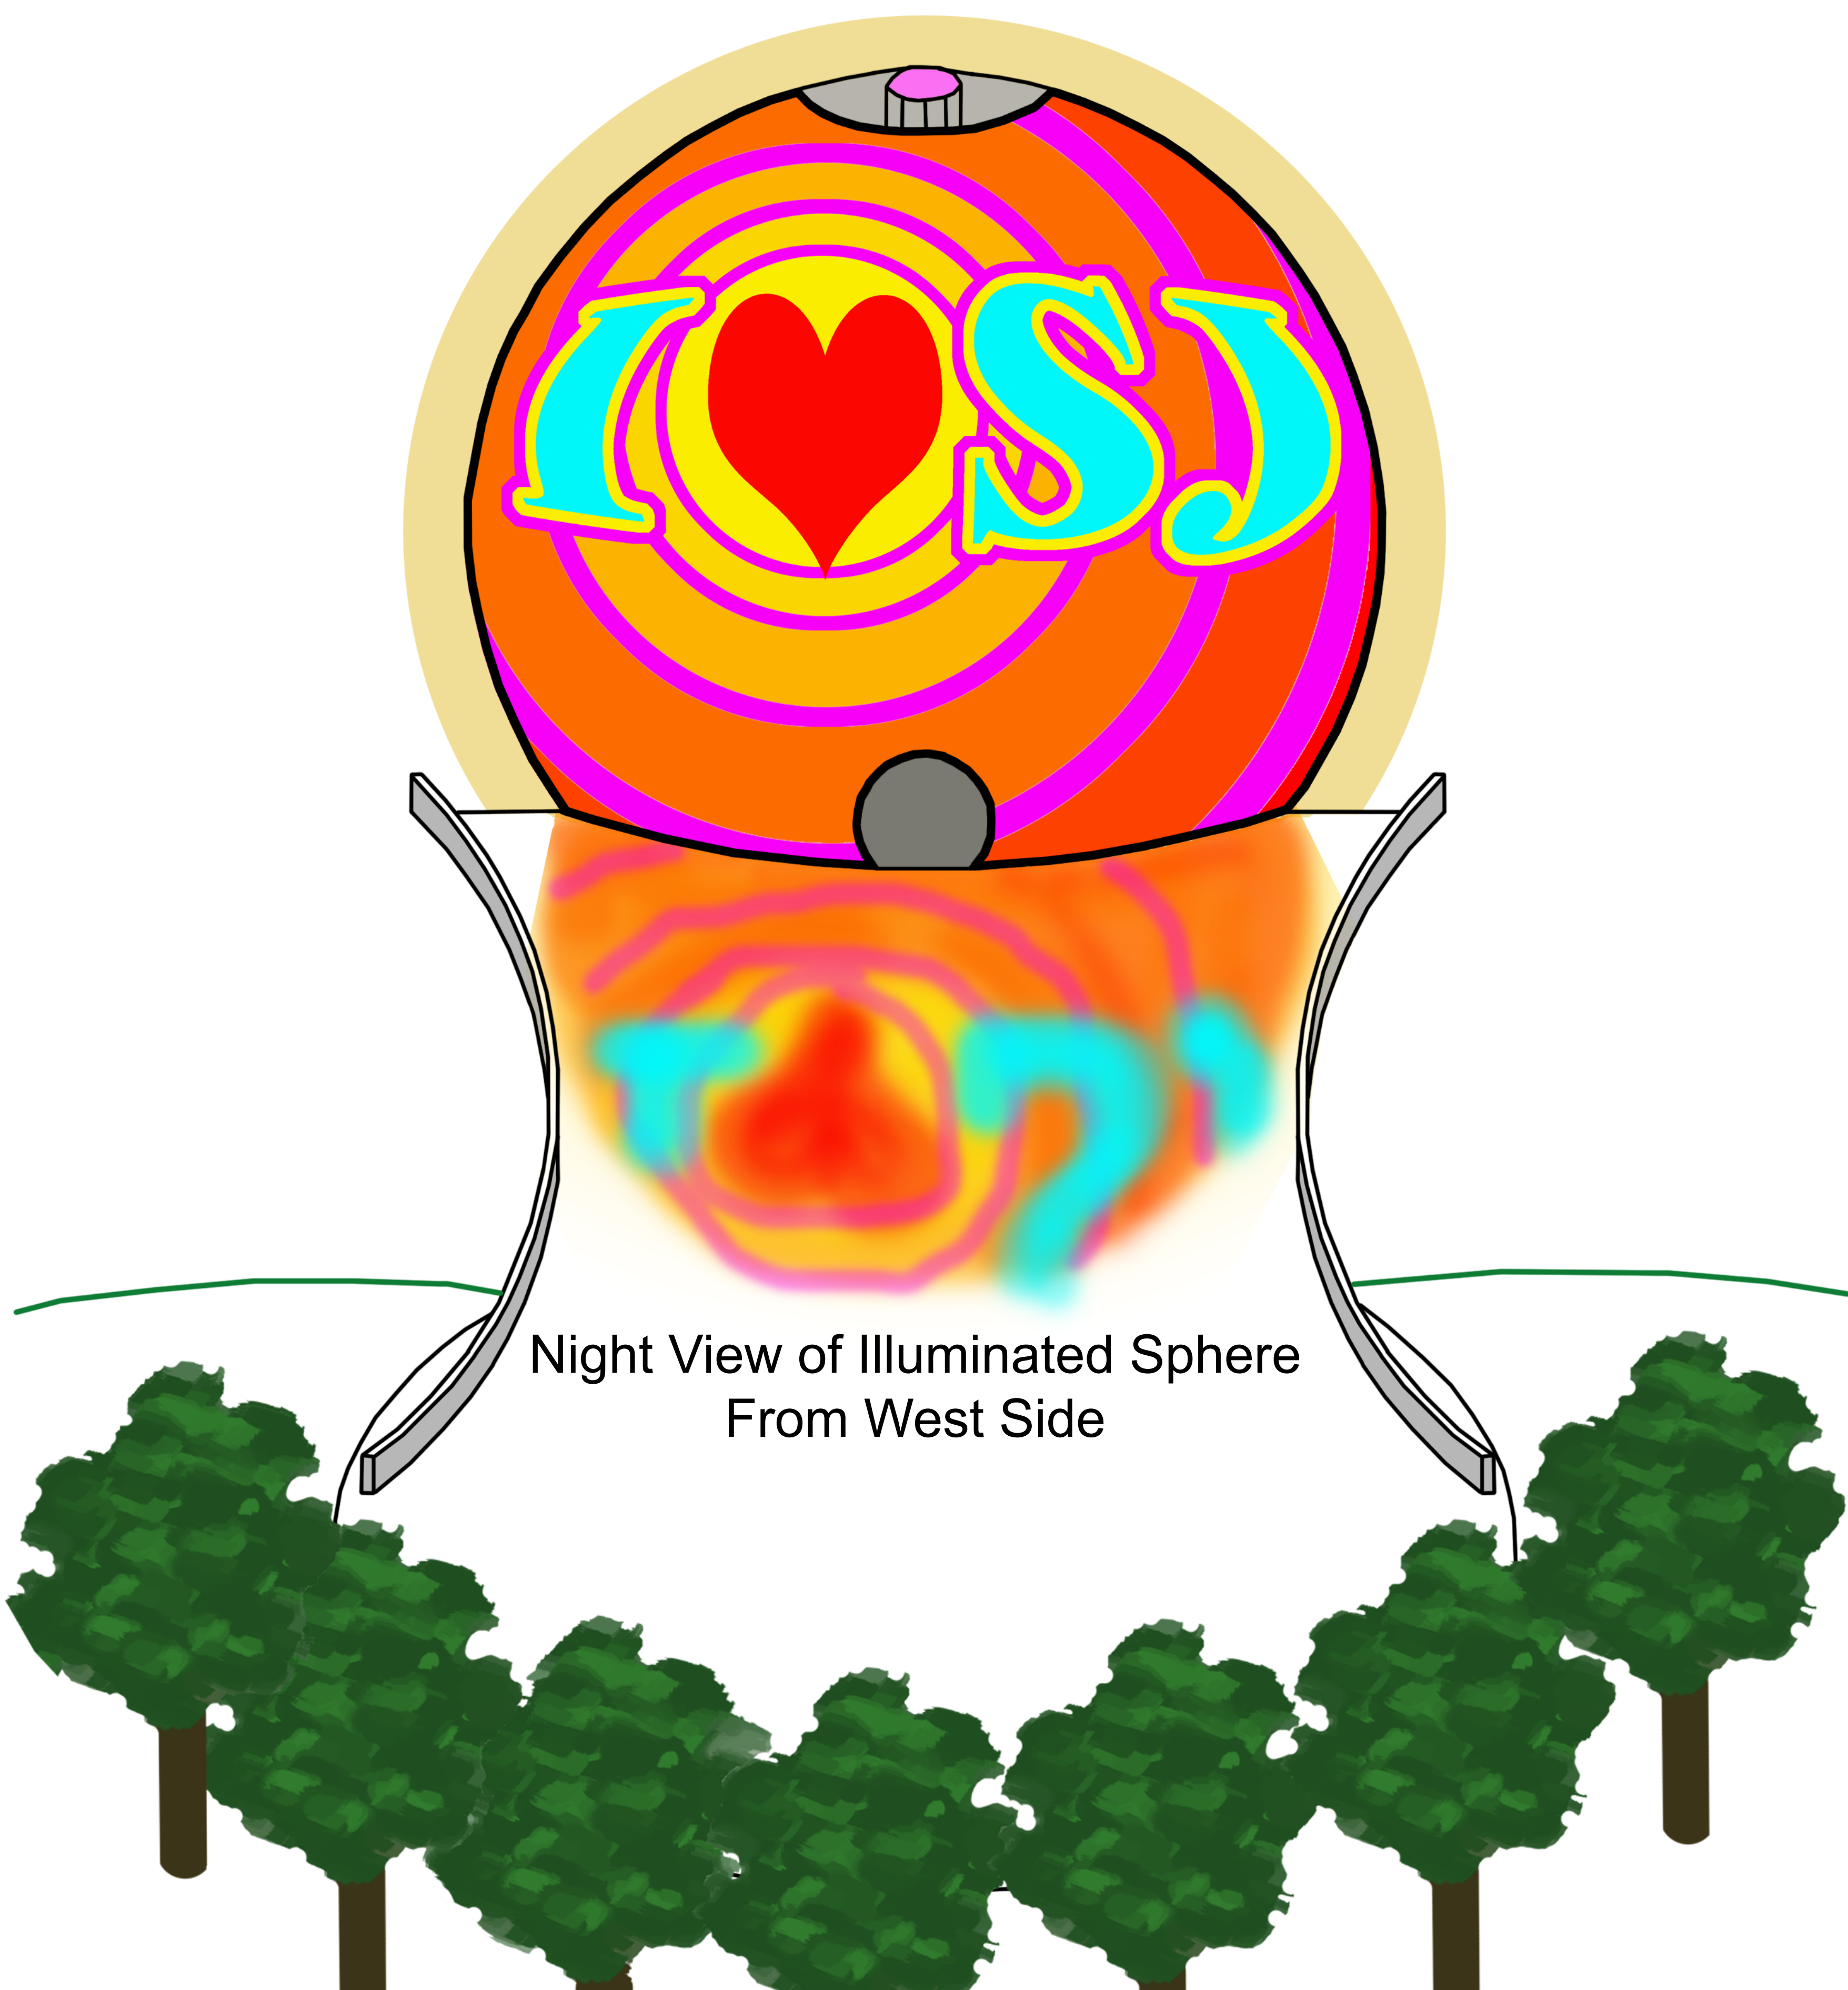

To limit ecological impact on creek, illumination will be for a short time only after dark, and bridge will effectively block direct light to creek area.

Park area designed to illustrate the balance between Nature (West Side) and Technology (East Side). West Side having a paved area surrounded by lawn and a ring of trees. Varied park space beyond that, showcasing native and low water needs plants. East side having a kinetic sculpture garden with various renewable energy generating elements. Small scale wind turbines, solar panel roof over a mural wall blocking off the Highway 87 freeway, kinetic energy floor panels. Retain existing look out point and add additional along creek border to view the sphere.

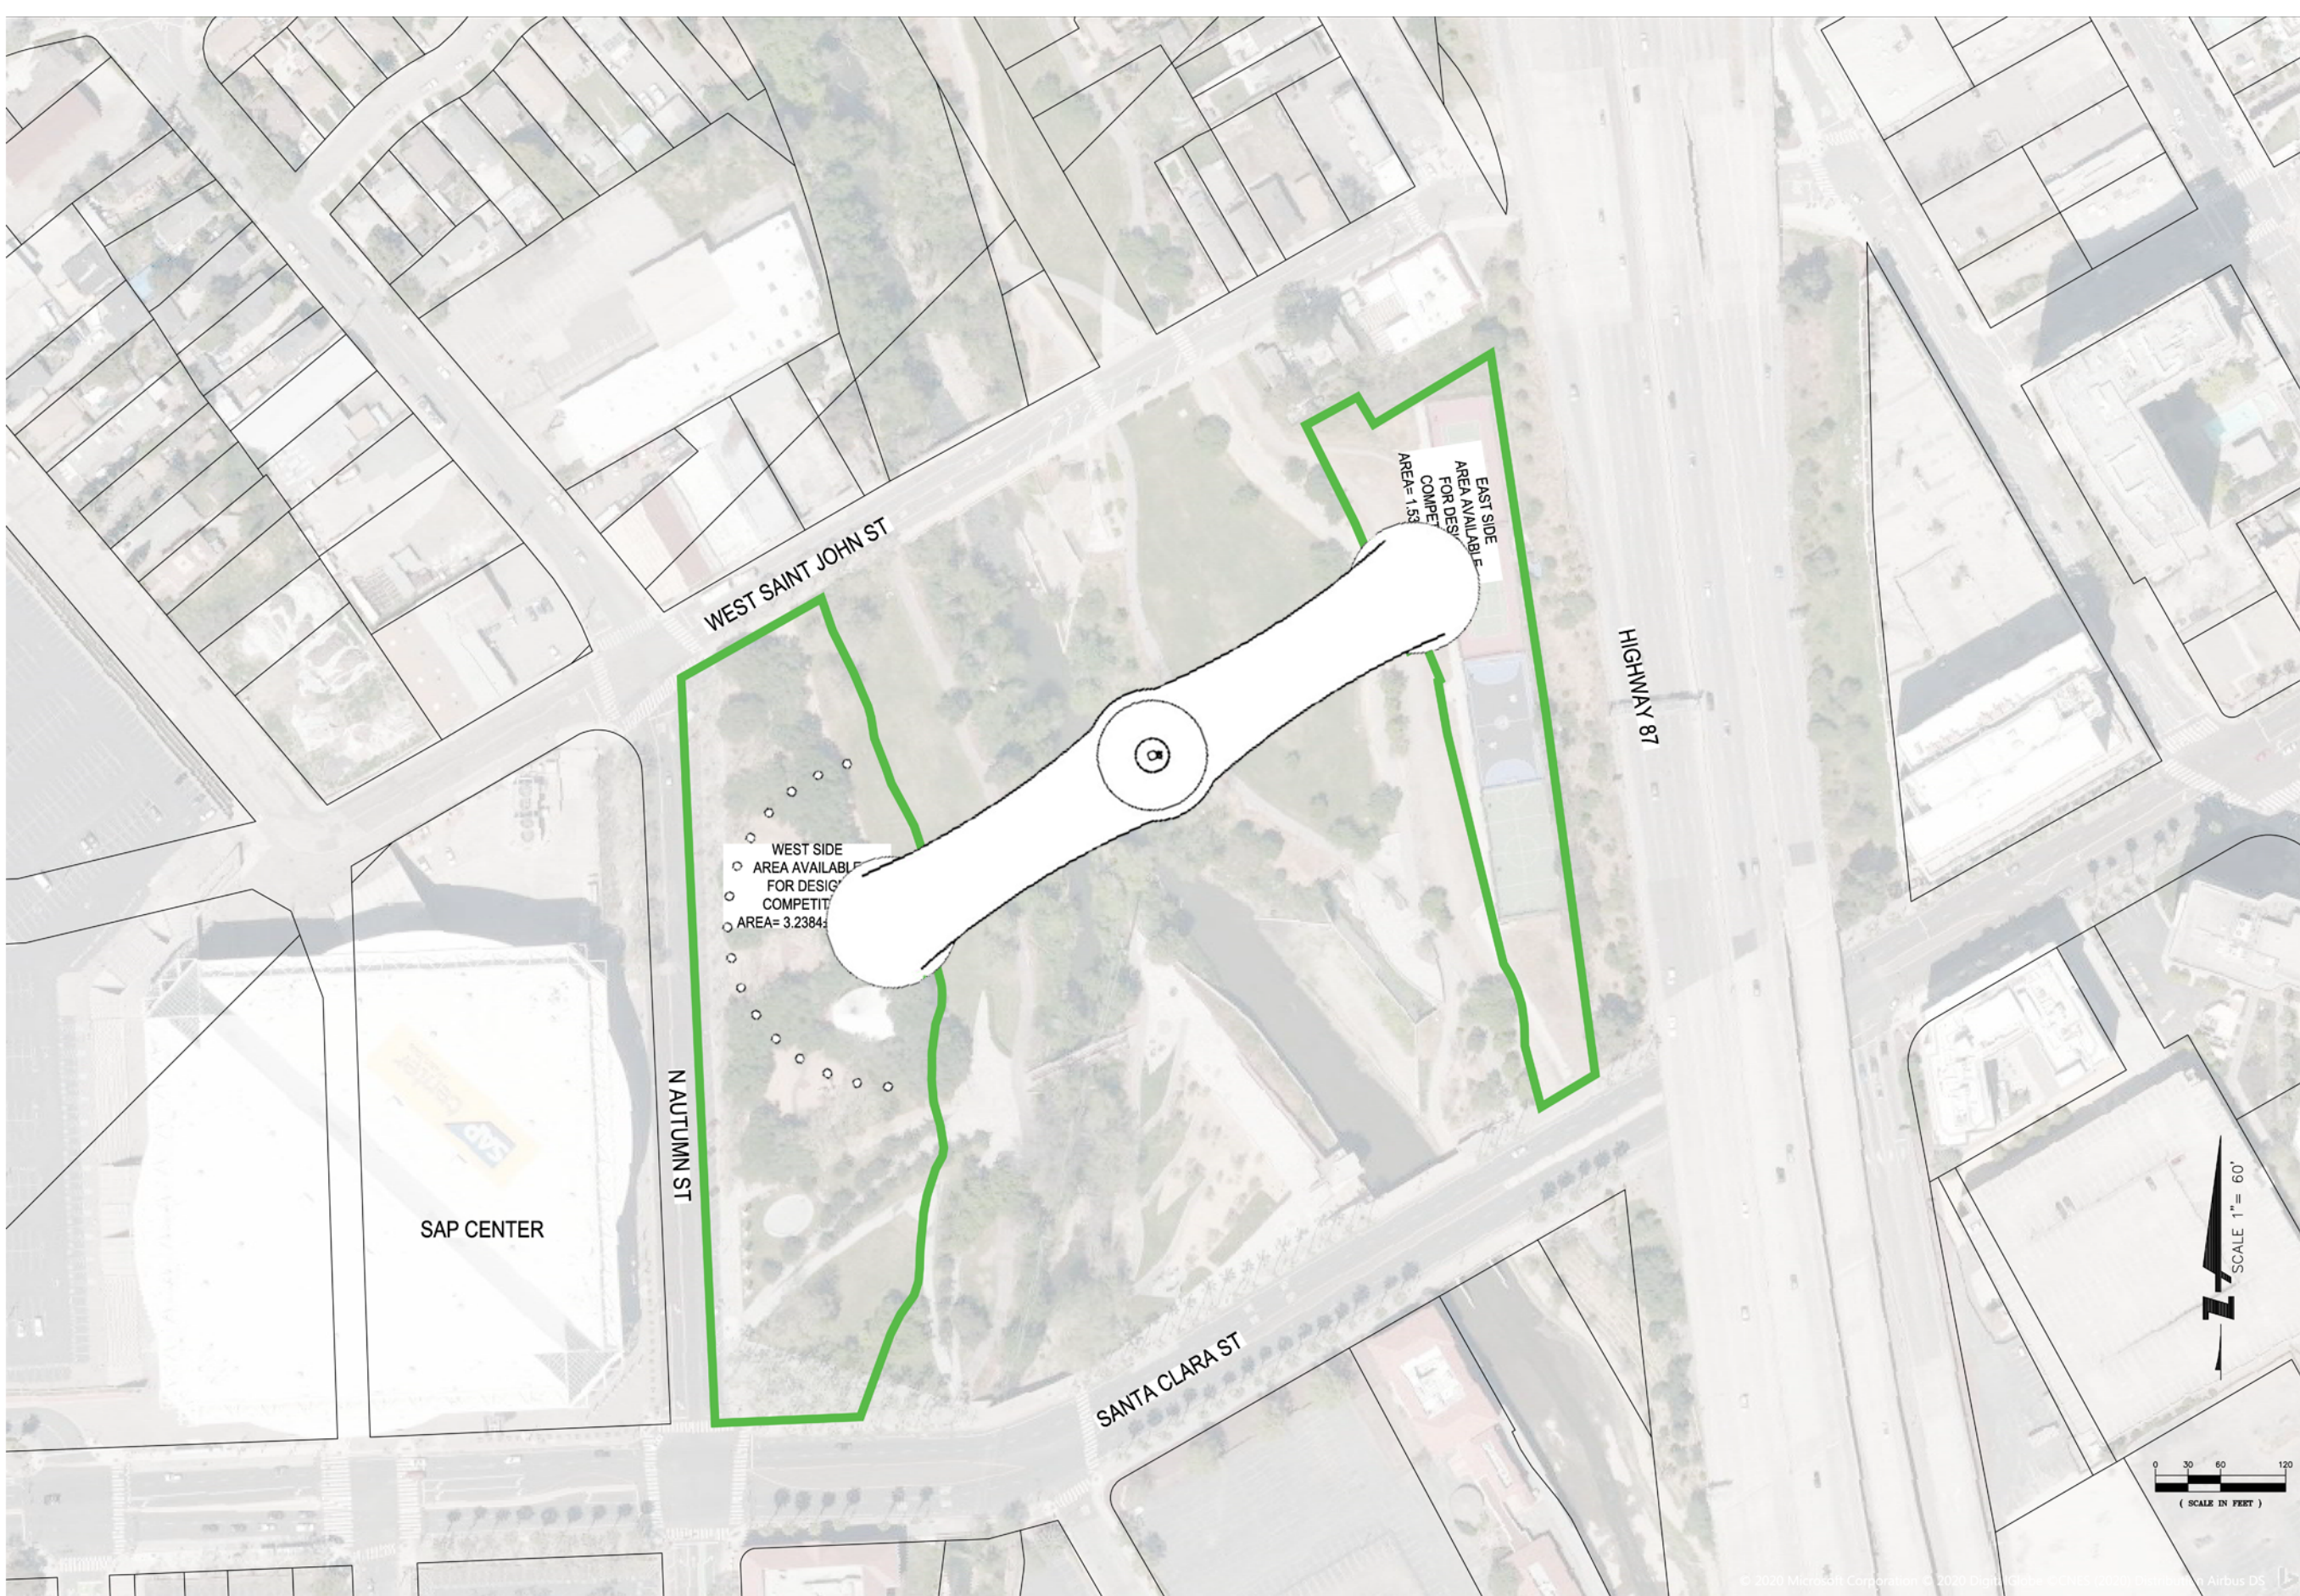

Programming of sphere illuminations will be open to local schools, community organizations, artists, designers, sports teams, companies. With an eye towards spreading the use of programming, technology, and community engagement to Bay Area children.
