

## **Project Statement**

“Crystal Basin” will be a forest of glass prisms standing 6-8’ tall. A circular path will lead visitors down the sides of the basin where visitors can meander through the forest of glass prisms. The basin will be 7-8’ below grade creating a bowl 75-100’ in diameter. As the sun moves over the basin, the light will filter through the tall prisms separating into cacophony of colors and geometric patterns along the walls and floor of the basin. As visitors walk, they will experience the colors, patterns and the magic of the prisms.

Net-Zero Statement: All electrical power will be sourced from an off-site solar array that will feed the grid with the equivalent amount of electricity that will be used. All lights will be LED.
