

The Light Cloud is luminous evanescence and *climate-correcting machine*, shading and cooling the park in days of global warming. In the evening it glows as a gigantic, urban luminaire, a universal invitation to visit. It doesn't impose meaning through form, offering the expression of civic cohesion of personal freedom of perception and unforgettable beauty by day and by night.

Atomized-water nozzles held by steel cables also carrying LED fiber-optics are supported by steel columns on the east and west edges of the site. Water is pumped from an underground cistern by pumps powered by photovoltaic panels, a perfect net-zero project.
