

Sunlight, my preliminary sketch, is made of semi transparent glass panels that consist of photo-based pieces through out both areas of the Arena Green. It is comprised of 3 panels of glass per set making 3 sets that will be printed and etched on that will both be semi transparent, permanent and will not fade. Each panel is approx 8'x 4' or larger and will have a framing system around it on a concrete raised base. I would like to collaborate with the team for placement and scale of the works.
