

Project Statement

When designing Project Wave for the Urban Confluence Competition I wanted to focus on something that could be for everyone. The key to a good landmark is inclusivity, so I chose something that is relatable to all people and unifies humans together: music. The building is an indoor and outdoor music hall with terraces over the rivier that take advantage of the curves to produce a wonderfully unique acoustic experience. The location is perfect because of it's proximity to public transportation. It will be recognized because of it's unique shape, it lights up at night and has light dance up and down the curves. The building's sound system will be a tribute to the incredible innovation and engineering from the area. The outdoor music performances will be accessible by anyone so as to include both community and tourists.
