

# PROJECT SUMMARY

## Objective

To Create Smiles. Smiling has been scientifically proven to:

- Help You Stay Positive
- Relieves Stress
- Elevates Our Mood
- Boosts Your Immune System
- Lower Blood pressure
- They Are Contagious
- Increases happiness and have better outlook through out life.

Best part is Everyone Understands A Smile, No Matter What Language You Speak.

## Goals

My goal is to spread smiles globally by creating interactive sculptures and placing them in high foot traffic areas. Everyone knows what a Selfie is now, these selfies create Smiles.

## Solution

A 6' life size Wooden mannequin, Sitting down on any available bench or sitting area in "selfie" position. The hands are covered in a soft rubber so phones or cameras do not slip out of the hands. Will need to secure the sculpture and can discuss possible ways to do this without damaging current sitting areas. Wooden Mannequin will be sealed and weather resistant using all natural materials as well as net-zero energy design. Eventually install AR (Augmented Reality) to dress up and decorate the sculptures digitally based on current events and holidays.

## Project Outline

- Discover Location & analyze availability.
- Strategize around location & measurements for perfect fit.
- Design & Develop proper ways to secure for semi-permanent position.
- Install & Enjoy =.]
