

Destination Point is the Silicon Valley landmark and an unmistakable way finding marker. It consists of two opaque red glass panels with black dots. The panels are sandwiched together and erected vertically upon a rotating cylindrical concrete pedestal. LED lights illuminate the glass panels from within. Around the base of the landmark's pedestal is a terrazzo plaza fenced by a waist-high, polished metal guard rail. LED lights are hidden along the underside of the guard rail to provide dramatic ground lighting at night. The entire landmark rises high enough to be clearly visible above surrounding treetops.
