

Project Summary

Spiral Span is an 3D exploration of Guadalupe Park at the confluence of Los Gatos Creek and the Guadalupe River. Based on the Fibonacci Series that is the root of nature. It is several spiral arms that bridge the confluence and span east to west. On each arm is a series of pods that users can enjoy unique perspectives of the river, park and surrounding city. At the confluence an observation ring offers a shared larger vantage point. The whole nest floats above the park just slightly to allow a ground based exploration to the shadows and sanctuaries below it.
