

*Wings of San Jose ∇ (Pronounced Turn A) Silicon Valley Project Summary*

This proposal would create the *tallest* and *largest* wooden structures in the United States. By using the latest in *Cross Laminated Timber Construction*, the project can change perception of the use of wood in large projects! If created they can usher in a new age of *creative renewable green, eco-friendly* construction in *Silicon Valley* and beyond!

The design is an amalgamation of various forms, creating a structural valley celebrating balance with nature, influenced by the cultures of the region. No acre is taken away from original park and is instead increased using artificial hills to hide subterranean spaces. Truly *Net-Zero!*
