MIDDAY PAVILION PERSPECTION

MORNING BRIDGE PERSPECTIVE

Arena Green currently lacks attractors and does not connect with its environment. We propose to reactivate the entire park block. We overlay a 40' hexagonal grid, a module for flexible, phased growth with a playful strategy of serendipity. We lay out a new network of looped bike/pedestrian paths. Each loop is zoned for a particular attractor program, multiplying the park crossings. Supercharge the circulation with a 4-point bridge over the river that both facilitates crossing and establishes a new destination, suspended over the river. At night things turn spectacular: All elements participate in a time-based animated light program, centered on the bridge, where the illuminated cables amaze from every angle.
