

THE CLOUD

THE TRACK

The track that connects the platform with the park is accessible to all public with its less than 4% slopes. The track is linked with the Guadalupe River Trail, extending the existing trail upwards while providing wellness facilities for joggers, runners, bikers and yoga practitioners alike. Floating above the park, the track promotes a healthy and active lifestyle of Silicon Valley to the world.

SUSTAINABILITY

The cloud is conceived as an education hub for innovation and sustainability. Part of the elevated platform is covered by dome-like canopies that collect rainwater to be used for vegetations on the platform as well as in the park. The roofs of the canopy are cladded with PV panels that generate energy for the net-zero energy landmark of the 21st century.
