

SJ tower is attempting to follow historic light tower with its conic structure. It seeks to make a public gathering with gardens and fountains on different levels, taking inspiration from the hanging gardens. The purpose is to connect all residents from different backgrounds and cultures together as one community. The two sides of the walkways rise slowly to reach the gate in the back, a metaphor for reaching a brighter future. The central bridge hovers over all land obstacles and connects the two sides of the bank and reaches the slanted elevator and stairs, which are connected to the peak.
