

## **ProjectSummary.doc**

For the conceptual idea it was proposed that it be a simple and natural element of the site, for that reason the water of the rivers was considered as the main design of the form.

1. Since rivers have been considered the main idea, they have vegetation along their banks.
2. It has also been considered that these sides of the sculpture are HOUSE FOR BIRDS, by proposing perforations where the birds can nest without any problem.
3. That the sculpture be part of the earth, of the place, that is why it is born from the earth and rises high in the sky of the Silicone Valley.
