

The site is a new extension of Silicon Valley, leading the way in cutting-edge science. Here, the starting point is how to bring 'quantum theory' as the most controversial theory in modern science to this site, and at the same time creating an architectural space and landmark that is open to everyone. The main features of the theory is that interactive reaction is happening depending on people's observation or consciousness. Thus, I came up with an architecture that constantly changes through visitors' experience and the forces of everyday nature.
