

# Project Summary

A ring which frames the confluence point. It bends upwards, creating two bridges. The observer can contemplate different shapes from different perspectives: an arch, a U-shaped structure, a circle, a heart, and an infinity symbol.

Vertical elements work both as parasols and power generators which are rotated by wind. In addition, a surface of photovoltaic cells generates more electric energy.

Lights delineate the shape of a feminine curve in the darkness of the night. An spectacular light show helps to appreciate a different shape, as times goes by.

**The Infinity Ring.**
